## I. INTRODUCTION

This Transportation Impact Analysis (TIA) has been prepared in support of the proposed new office building (Building G) at the Lam Research campus in Tualatin, Oregon. Figure 1 (in Appendix A) presents a vicinity map indicating the project location.

### Project Description

An approximately 120,000-square-foot (SF) office building is proposed just north of SW Leveton Drive between the existing Center and East Accesses. Up to 600 office staff are planned to occupy the proposed building. Fewer than 10% of the new office staff will work remotely. Surface parking for approximately 530 spaces is proposed along SW 108th Avenue. The buildout year for the new office building is assumed to be 2024.

The existing East Access on SW Leveton Drive is proposed to be limited to truck access. To accommodate the additional office trips, two (2) new driveways are proposed on SW 108th Avenue with direct access to the expanded parking area. The North Access is proposed to be aligned opposite the north driveway serving Olympic Controls. The South Access is proposed approximately 445 feet south of the North Access.

### Scope of Analysis

This TIA has been prepared in accordance with the *City of Tualatin Traffic Study Requirements* (updated March 16, 2022), Tualatin Development Code (TDC) Section 74.440, and the Oregon Department of Transportation's (ODOT) *Analysis Procedures Manual* (APM) Version 2. This study includes a summary of existing traffic conditions, crash review, proposed trip generation, and an analysis of intersection operations, sight distance, queuing, and signal and turn-lane warrants.

A TIS scoping letter dated June 30, 2022 was submitted to City staff and approved in a July 15, 2022 email. An additional study area intersection was requested in an August 2, 2022 email. The scoping letter and corresponding communications are provided in Appendix B for reference.

### Study Area

The City's *Traffic Study Requirements* document requires all intersections within a 1/4-mile radius of the project site be included as part of the study area. Washington County requires analysis for all intersections where project trips will exceed 10% of the existing average daily traffic (ADT). No Washington County intersections were found to meet this threshold. The following intersections are located within the 1/4-mile radius and were included in the study area:

1. Pacific Highway W (OR-99W)/SW 124th Avenue
2. SW Tualatin Road/SW 124th Avenue
3. SW Tualatin Road/SW 108th Avenue
4. SW 108th Avenue/North Access
5. SW 108th Avenue/South Access
6. SW Leveton Drive/SW 124th Avenue
7. SW Leveton Drive/SW 118th Avenue
8. SW Leveton Drive/West Access
9. SW Leveton Drive/Center Access
10. SW Leveton Drive/East Access

11. SW Leveton Drive/SW 108th Avenue
12. SW Herman Road/SW 108th Avenue
13. SW Tualatin Road/SW Teton Avenue

All study area intersections are located within City of Tualatin jurisdiction. The OR 99W/SW 124th Avenue intersection is located on an ODOT facility.

#### ***Analysis Scenarios***

This TIS addresses AM and PM peak hour conditions for the following analysis scenarios:

- 2022 Seasonally Adjusted
- 2024 Pre-Development without proposed Office
- 2024 Post-Development with proposed Office

## II. EXISTING CONDITIONS

The existing conditions analysis is based on a current year 2022 inventory of transportation facilities and traffic data.

### Site Conditions

The project site is in Tualatin, Oregon within the Portland metropolitan area. The site is approximately 58.01 acres and consist of tax lots 100 of Washington County tax map 2S1 22AB, and tax lots 500 and 800 of tax map 2S1 22AA. The site is part of the City's Manufacturing Park (MP) Planning District. The Novellus Industrial Master Plan (IMP) was approved in 2001 as a four-phase development consisting of 1,440,000 SF. The proposed office building is considered to be the last building of the IMP's Phase 1. The proposed site plan is presented in Figure 2.

### Vehicular Transportation Facilities

Figure 3 presents existing lane configurations and traffic control devices for all study area intersections. Table 1 below summarizes roadway characteristics within the study area.

TABLE 1 – ROADWAY CHARACTERISTICS

Roadway	Functional Classification	Posted Speed	Travel Lanes	Bike Lanes	On-Street Parking	Sidewalks
OR 99W (Pacific Highway W)	Major Arterial/ (Urban Principal Arterial)	45/55 mph	4	Yes	None	Intermittent
SW 124th Avenue	Major Arterial	45 mph	4/5	Yes	None	Yes
SW Tualatin Road	Major Collector	35 mph	3	Yes	None	Yes
SW Leveton Drive	Minor Arterial	35 mph	2	Yes	None	Yes
SW 108th Avenue	Minor Collector (north of SW Leveton Drive)	35 mph	2	Yes	None	Yes
SW Herman Road	Minor Arterial	35 mph	2	Yes	None	Yes
SW Teton Avenue	Minor Arterial	35 mph	2	Yes	None	Yes

### Pedestrian and Bicycle Facilities

The study area has nearly complete bicycle and pedestrian networks. Clearly marked bike lanes are provided on all study area roadways. Curb-tight sidewalks are provided on SW 108th Avenue and SW Tualatin Road, as well as some segments of the north side of SW Herman Road. Separated sidewalks are provided on all other study roadways and segments.

### Transit Facilities

The study area is served by TriMet Bus Lines 94 and 97 with stops on Pacific Highway W (OR 99W) and SW Tualatin Road. The Tualatin Shuttle also has a stop on SW Leveton Drive just south of the site. Transit maps and bus schedules are provided in Appendix C for reference.

## Existing Traffic Counts

Existing turning movement counts were collected on Thursday, June 9, 2022, during the AM and PM peak periods.

Historical traffic counts from Tuesday, May 11, 2021 for the SW Tualatin Road/SW Teton Avenue intersection were utilized as this intersection was requested for analysis by City staff while school was not in session. An adjustment of 1.30 was applied to the AM peak hour counts and an adjustment of 1.05 was applied to the PM peak hour counts at this location to reflect the growth from 2021 to 2022.

Figure 4 presents the existing AM and PM peak hour traffic volumes. Raw traffic count summaries are provided in Appendix D.

### ***Seasonal Adjustment***

Pacific Highway W (OR 99W) is a state facility which requires a seasonal adjustment as specified in the APM. There is no seasonal adjustment data available for this location as there is no nearby Automatic Traffic Recorder (ATR). Therefore, a seasonal adjustment of 1.01 derived from data presented in ODOT's 2020 Seasonal Trend Table for the "Commuter" trend was applied to 2022 existing through volumes on OR 99W. The 2020 Seasonal Trend Table relies on pre-COVID 2019 volumes and is therefore the best available data for 2022 traffic. The 2022 seasonally adjusted traffic volumes are presented in Figure 5. The seasonal adjustment calculation is provided in Appendix E for reference.

### ***Adjustment for Telecommuting***

Existing traffic counts collected on Thursday, June 9, 2022 reflect a portion of Lam office staff telecommuting. While a review of historical and existing traffic counts on I-5 just north of the Nyberg Street exit shows that existing traffic in the greater Tualatin area may be comparable to pre-COVID traffic, existing counts adjacent to the Lam site are lower due to some staff currently telecommuting.

Lam Research does not currently have a permanent hybrid work plan. Therefore, we propose to growth adjust existing traffic counts to match 100% on-site attendance by applying an adjustment factor of 1.92 in the AM peak hour and 1.28 in the PM peak hour to site trips. These adjustments were based on the actual 2018 and 2022 turning movement volumes at the site driveways. The AM peak adjustment is higher than the PM peak adjustment, likely due to office staff entering the site later in the day, outside the morning peak between 7 AM and 9 AM, while continuing to exit the site during the afternoon peak between 4 PM and 6 PM. These modified site trips were carried through the adjacent roadway network as needed, similar to in-process trips, to estimate traffic volumes without the current remote work scenario.

TABLE 2 – TRAFFIC ADJUSTMENT FOR TELECOMMUTING					
AM Peak Hour Site Trips			PM Peak Hour Site Trips		
2018 Historical	2022 Existing	Adjustment Factor	2018 Historical	2022 Existing	Adjustment Factor
Entering – 422 Exiting – 26 Total – 448	Entering – 221 Exiting – 50 Total – 271	1.92 (Entering Only)	Entering – 168 Exiting – 445 Total – 613	Entering – 149 Exiting – 349 Total – 498	1.28

Figure 6 presents the additional 2022 site trips for remote workers during the AM and PM peak hours.

### ***SW 108th Avenue Driveways***

This TIA reviews the impact the proposed driveways on SW 108th Avenue will have on existing, nearby driveways. In order to estimate the possible queues along SW 108th Avenue, the trips generated by the existing Olympus Controls building were estimated using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition data for a "Warehouse" use (LUC 150). The proposed North Access will be aligned opposite the northern access serving Olympus Controls. The proposed South Access will be spaced approximately 130 feet north of the southern access serving Ascentec Engineering. The Olympus Controls building is estimated to generate 33 AM and 35 PM peak hour trips. These trip generation estimates and the existing traffic counts were used to estimate the volumes at the Olympus Controls driveways. Existing peak hour counts for the southern Ascentec Engineering access were collected and are provided in Appendix D.

### **Crash Analysis**

Historical crash data reported for the study area intersections were evaluated to identify patterns that might indicate a safety concern. Crash data for the 5-year period of 2016 through 2020 were obtained from ODOT's online crash data system and used to review crash patterns and estimate intersection crash rates.

The crash evaluation is summarized in Table 3. The raw crash data are provided in Appendix F.

TABLE 3 – INTERSECTION CRASH RATES								
Intersection (Traffic Control Type)	Year					Total Crashes	ADT	Crash Rate
	2016	2017	2018	2019	2020			
Pacific Highway W/ SW 124th Avenue (Signalized)	7	6	7	7	2	29	49,000	0.32
SW Tualatin Road/ SW 124th Avenue (Signalized)	2	3	1	3	1	10	25,800	0.21
SW Tualatin Road/ SW 108th Avenue (TWSC)	2	0	0	0	1	3	13,100	0.13

TABLE 3 – INTERSECTION CRASH RATES								
Intersection (Traffic Control Type)	Year					Total Crashes	ADT	Crash Rate
	2016	2017	2018	2019	2020			
SW Leveton Drive/ SW 124th Avenue (Signalized)	0	2	1	4	1	8	17,500	0.25
SW Leveton Drive/ SW 118th Avenue (AWSC)	0	0	0	0	0	0	4,900	0.00
SW Leveton Drive/ SW 108th Avenue (TWSC)	1	2	0	0	0	3	3,100	0.53
SW Herman Road/ SW 108th Avenue (Signalized)	1	0	0	0	1	2	11,200	0.10
SW Tualatin Road/ SW Teton Avenue (TWSC)	1	1	1	2	0	5	14,600	0.19

### ***Crash Data Summary***

During the five-year study period, there were 29 collisions reported at the intersection of Pacific Highway W (OR 99W) and SW 124th Avenue. 21 of these were rear-end collisions, the majority of these being in the northbound through direction. Five (5) of the other crashes were turning movement collisions. These collisions were reported to be caused by drivers failing to avoid the vehicle ahead or improper turns and other improper driving. The remainder of crashes include two (2) angle collisions and one (1) fixed object collision. All of these collisions were reported to cause property damage (12 collisions) or minor injuries (15 collisions), with two (2) Injury B type crashes in 2016 and 2020.

Ten (10) collisions were reported at the intersection of SW Tualatin Road and SW 124h Avenue. Six (6) of these were turning movement collisions caused by a failure to yield by drivers completing the southbound left-turn movement. This may be the result of drivers running red lights due to a high turn volume and a short green phase. Five (5) of these collisions caused possible injuries (Injury Type C). There was one collision involving a pedestrian; a driver completing a westbound right turn failed to yield to a pedestrian in the crosswalk at the intersection. The other reported crashes were rear-end and fixed-object type collisions, mostly in the westbound direction.

At the intersection of SW Tualatin Road and SW 108th Avenue, all three (3) reported crashes were turning movement collisions caused by drivers failing to yield or drivers disregarding a traffic control device, and mostly by drivers completing the northbound left-turn movement. Again, this may be due to drivers running red lights due to a high turn volume and short green phase.

At the intersection of SW Leveton Drive and SW 124th Avenue, there were eight (8) reported crashes, five (5) of which were rear-end collisions. Four (4) of these crashes caused injuries of Type B or C. Six (6) of these collisions occurred in the southbound direction. Rear-end collisions are typical at signalized locations where drivers may stop abruptly at the onset of a yellow light.

At the intersection of SW Leveton Drive and SW 108th Avenue, there were three (3) reported crashes in the past five (5) years. Two (2) were turning movement collisions and the other one (1) was a rear-end collision. All three crashes occurred in the eastbound and westbound directions, and were caused by inattention or failure to yield.

During the study period, there have been two (2) rear-end collisions at the SW Herman Road/SW 108th Avenue intersection. These occurred in the eastbound and westbound directions, and were caused by inattention.

At the intersection of SW Tualatin Road and SW Teton Avenue, there have been five (5) reported crashes in the last five (5) years. Three (3) of these collisions were turning movement collisions for the northbound left-turn movement, caused by a failure to yield. This is likely due to drivers taking shorter gaps in traffic due to heavy through volumes on SW Tualatin Road. All of the crashes which occurred in the northbound left turn caused “property damage only” and no injury. The other two (2) collisions were one (1) rear-end in the northbound movement and one (1) fixed-object collision.

Overall, there were no fatalities or serious injury crashes reported in the least five (5) years at any study area intersections. There appear to be no safety deficiencies at any study area intersections that contribute to the historical crashes reviewed.

#### ***Intersection Crash Rates***

Intersection crash rates were calculated as a measure of the number of crashes occurring per one million entering vehicles (MEV) per year. The intersection crash rate is calculated by dividing the average number of crashes per year by the MEV per year. An average daily traffic (ADT) volume was estimated by dividing the PM peak hour volume at each intersection by a peak-to-daily factor, or k-factor, of 0.09 obtained from ODOT’s 2020 traffic flow data on OR 99W just west of SW 124th Avenue.

All intersections have crash rates below 1.0 MEV. Therefore, no further analysis is recommended.

### III. PRE-DEVELOPMENT CONDITIONS

The pre-development conditions reflect build-out year conditions without the proposed development. This scenario includes existing year 2022 traffic volumes, a seasonal adjustment to traffic on OR 99W, a growth adjustment factor to account for telecommuting staff, background growth to year 2024, and in-process trips from nearby approved developments. The pre-development traffic without project trips will indicate if traffic issues are present before the addition of the proposed development.

#### Planned Transportation Improvements

The City of Tualatin Capital Improvement Plan 2021-2025 (CIP) was reviewed for any planned transportation improvements in the area that may affect capacity. The City plans to add a northbound turn lane at the SW Herman Road/SW 118th Avenue intersection. While this improvement is near the development site, it does not impact future capacity or trip routing for any study area intersections in this report.

#### Background Traffic Growth

Background traffic growth was applied to adjusted year 2022 traffic volumes to forecast future traffic demand. A linear 1% annual growth rate over two (2) years was applied to year 2022 traffic volumes to estimate 2024 background traffic volumes. This growth adjustment was based on ODOT traffic volume projections for OR 99W just south of SW 124th Avenue between years 2019 and 2040. Background growth was applied to all movements at all intersections, except driveways. Figure 7 presents the background growth from 2022 to 2024 for the AM and PM peak hours.

#### In-Process Traffic

In-process traffic volumes account for developments that have been approved or that are under construction at the time of a traffic study. These traffic volumes account for traffic that will be added to the external roadway network before buildout of the proposed development. Traffic volumes for the following developments were included as in-process:

- Tualatin Logistics Park
- Lu Pacific Development (Herman Road Industrial)
- Hedges Creek Industrial

Four (4) access scenarios were provided in the TIA prepared for the Tualatin Logistics Park project. The in-process trips included in this TIA reflect the volumes provided in Scenario 2, which is consistent with the approved access configuration. Figure 8 presents the in-process trips during the AM and PM peak hours.

#### Pre-Development Traffic

The 2024 pre-development analysis scenario is a combination of existing year 2022 traffic volumes, a seasonal adjustment factor on OR 99W, a growth adjustment factor to account for telecommuting staff, background growth of 1% over two (2) years, and in-process trips from nearby approved developments. Figure 9 presents the 2024 pre-development traffic volumes during the AM and PM peak hours.

## IV. SITE DEVELOPMENT

The trip-making characteristics of the proposed development are described below.

### Trip Generation

The proposed 120,000 SF office building will provide space for office staff generally working between 8 AM and 5 PM. Up to 600 employees will be added to the campus with the new office building. Most new office staff are anticipated to work from the office in the future. Trip generation estimates were developed with the use of the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition. The City requires the reasonable worst case for trip generation be analyzed. Therefore, trip rates for ITE's "General Office Building" (LUC 710) using building area were utilized in this study.

Table 4 presents the trip generation estimates for the proposed office building.

**TABLE 4 – TRIP GENERATION**

ITE Code	ITE Land Use	Size	Trip Type	AM Peak Hour			PM Peak Hour			Daily
				In	Out	Total	In	Out	Total	
710	General Office Building	120.0 KSF	Total	172	24	196	33	160	193	1,360

### Trip Distribution and Assignment

Trip distribution for the proposed office building was estimated by reviewing the existing distribution from recent and existing counts at the site driveways in conjunction with review of previous trip distribution assumptions for the Lam Research campus. The following trip distribution was assumed:

- 15% to/from the south on Highway 99W
- 25% to/from the north on Highway 99W
- 5% to/from the east on SW Tualatin Road
- 15% to/from the south on SW 124th Avenue
- 5% to/from the south on SW 118th Avenue
- 35% to/from the east on SW Herman Road

Figure 10 presents the trip distribution and traffic assignment for the AM and PM peak hours.

### East Access Reroutes

With the proposed building, other site changes including additional parking along SW 108th Avenue, two (2) new driveways on SW 108th Avenue, and limiting the East Access on SW Leveton Drive to trucks are proposed. With the closure of the East Access to passenger vehicle traffic, existing site trips that currently utilize this driveway are anticipated to reroute to the proposed driveways on SW 108th Avenue to access the expanded parking area. Figure 11 presents the East Access trip reroutes for the AM and PM peak hours.

## Post-Development Traffic

Post-Development traffic volumes are the sum of the project trips and the pre-development traffic volumes. Figure 12 presents the 2024 post-development traffic volumes for the AM and PM peak hours.

## V. SITE ACCESS AND CIRCULATION

The on-site evaluation of traffic access and circulation and a review of sight distance at the existing site driveways are presented below.

### **Site Access**

The proposed development will have access to two (2) existing, full-movement driveways on SW Leveton Drive and two (2) proposed, full-movement driveways on SW 108th Avenue. The third driveway on SW Leveton Drive will be limited to trucks and will become directional (inbound or outbound only).

### **Access Standards**

The TDC includes several sections related to access standards. Chapter 75 of the TDC presents access standards relative to driveway widths and spacing on the site. Per Table 75-1 of the TDC, minimum driveway approach width for industrial driveways is 36 feet and the maximum is 40 feet for driveways providing access for over 250 parking spaces. The existing driveways for the site meet these standards. The proposed driveways on SW 108th Avenue will meet these standards at a proposed width of 36 feet.

Per TDC 75.120, driveways on Minor Collectors must be spaced a minimum of 100 feet. Driveways must be located at least 150 feet from the intersection of Collector or Arterial streets, as measured from the stop bar, per TDC 75.040(11)(a). Additionally, driveways must provide a minimum distance of 40 feet between on-site driveways per TDC 75.040(10).

TABLE 5 – ACCESS SPACING SUMMARY					
Access	Roadway	Functional Classification	Spacing Standard	Access Spacing Measured Edge-to-Edge	
				To North	To South
North Access	SW 108th Avenue	Minor Collector	150' to Arterial or Collector intersections/ 100' between driveways	635 feet	445 feet
				445 feet	150 feet

The proposed site driveways on SW 108th Avenue will meet the City's access spacing standards as summarized in Table 5.

### **On-Site Circulation**

The site currently provides access to staff via three full-movement driveways on SW Leveton Drive. A fire access is provided on SW Tualatin Road opposite SW 115th Avenue and a construction access is provided on SW 108th Avenue approximately 300 feet south of SW Tualatin Road. Both of these driveways are gated.

With the proposed office building, the East Access on SW Leveton Drive will be limited to truck use. Two (2) new full-movement driveways are proposed on SW 108th Avenue. The North Access will be provided opposite the northern access to Olympus Controls. The South Access will be provided approximately 445 feet south of the North Access. Trucks will navigate to the new office building by entering the East Access on SW Leveton Drive and exiting the proposed South Access on SW 108th Avenue. All new office staff are

anticipated to access the site via the two (2) proposed driveways on SW 108th Avenue where an additional approximately 500 new parking spaces will be provided.

### Sight Distance Evaluation

Intersection sight distance was evaluated for the proposed site driveway locations. The American Association of State Highway and Transportation Officials' (AASHTO) *A Policy on Geometric Design of Highways and Streets*, 7th Edition provides recommendations for intersection sight distance (ISD) based on roadway design speed. At minimum, stopping sight distance (SSD), also based on roadway design speed, must be provided.

A time gap of 7.5 seconds and 11.5 seconds were assumed for passenger vehicles and combination trucks completing a left turn from stop, respectively. SW 108th Avenue is relatively flat. Therefore, no grade adjustments were made for the ISD and SSD calculations. There is no posted speed on SW 108th Avenue north of SW Herman Road. Therefore, the design speed on SW 108th Avenue was assumed to be 5 mph over the posted speed of 35 mph for other Minor Collectors in the area, or 40 mph. The recommendations for ISD have been noted for left turns from stop on a stop-controlled minor approach (driveway). The sight distance evaluation for the site driveways is presented in Table 6.

TABLE 6 – SIGHT DISTANCE EVALUATION						
Access/ Intersection	Design Speed (mph)	Design Vehicle	Recommended Intersection Sight Distance (feet)	Required Stopping Sight Distance (feet)	Available Sight Distance (feet)	
					To North	To South
SW 108th Avenue/ North Access	40	Passenger	445	305	430	>500
SW 108th Avenue/ South Access	40	Passenger	445	305	>700	>700
		Combination Truck	680			

As presented in Table 6, the recommended ISD is available to the south from both proposed driveway locations, as well as to the north from the South Access for both passenger vehicles and combination trucks. From the proposed North Access location, there is a vertical crest to the north on SW 108th Avenue that precludes meeting the recommended ISD by 15 feet. However, both proposed site driveway locations are projected to meet the SSD requirement in both directions along SW 108th Avenue.

## VI. OPERATIONAL ANALYSIS

Two aspects of operational analysis were evaluated for the study area intersections: 1) intersection operations analysis, which evaluates how well an intersection processes traffic demand, and 2) queuing analysis, which compares intersection queues with available storage for different travel lanes.

### Intersection Operation Analysis

Intersection operations are generally measured by three (3) mobility standards: volume-to-capacity (v/c) ratio, level-of-service (LOS), and delay (measured in seconds). Signalized and all-way, stop-controlled (AWSC) intersections are measured by one (1) overall v/c ratio, LOS, and delay. Two-way, stop-controlled (TWSC) intersections are typically measured by a single v/c ratio, LOS, and delay representative of the worst stopped movement.

#### *Performance Measures*

All study area intersections are located within City of Tualatin jurisdiction but OR 99W is under ODOT's jurisdiction.

#### *City of Tualatin*

The TDC Section 74.440(3)(e) requires the following mobility standards for intersections within City jurisdiction:

- LOS D or better for signalized intersections
- LOS E or better for unsignalized intersections

#### *ODOT*

The *Oregon Highway Plan* (OHP) designates OR 99W as a Principal Arterial Route at SW 124th Avenue. Table 7 of the OHP establishes a v/c target of 0.99 for the OR 99W/SW 124th Avenue intersection.

#### *Methodology*

Intersection operations were analyzed with the use of Synchro 11 software, which utilizes the Transportation Research Board's *Highway Capacity Manual* (HCM) 2000, HCM 2010, and HCM 6 methodologies. Signalized study area intersections were reported using HCM 2000 reports for overall v/c ratio and HCM 6 reports for delay and LOS. Two-way, stop-controlled (TWSC) and AWSC intersections were reported using HCM 6 reports. Signal timing plans were obtained from the Washington County traffic plans database, as well as from ODOT staff, and are provided in Appendix H for reference.

#### *Findings*

The operations results for the intersection or critical movement at each study area intersection are presented in Table 7. The detailed Synchro capacity results are provided in Appendix I for reference.

**TABLE 7 – PEAK HOUR INTERSECTION OPERATIONS**

Intersection (Control)	Peak Hour	Analysis Results (v/c-LOS-Delay in seconds)		
		2022 Existing	2024 Pre-Development	2024 Post-Development

TABLE 7 – PEAK HOUR INTERSECTION OPERATIONS				
Intersection (Control)	Peak Hour	Analysis Results (v/c-LOS-Delay in seconds)		
		2022 Existing	2024 Pre-Development	2024 Post-Development
SW Tualatin Road/ SW Teton Avenue	AM	0.32-D-25.8 (NBL)	0.35-D-27.7 (NBL)	0.35-D-28.3 (NBL)
	PM	<b>0.96-F-99.1 (NBL, Synchro)</b> LOS E-26.5 (NBL, SimTraffic)	<b>1.03-F-122.6 (NBL, Synchro)</b> LOS E-29.9 (NBL, SimTraffic)	<b>1.05-F-128.2 (NBL, Synchro)</b> LOS E-38.5 (NBL, SimTraffic)

The East Access on SW Leveton Drive will be restricted to truck use, which will primarily occur outside the typical peak of the street. Therefore, site operations are listed as “N/A” under post-development conditions.

As presented in Table 7, all study area intersections currently meet the City’s mobility standards except the SW Tualatin Road/SW Teton Avenue intersection. The northbound left-turn movement currently operates at an LOS F during the PM peak hour and is projected to continue to fail in the future, per the Synchro analysis results. All other study intersections are projected to continue meeting standards with the proposed office building.

The estimated delay provided by Synchro software at the intersection of SW Tualatin Road/SW Teton Avenue appears to provide a conservative estimate of approximately 99 seconds for the northbound left-turn movement during the PM peak hour; however, a review of PM peak hour traffic at the intersection shows an observed delay of approximately 14 seconds. Additionally, the delay reported by SimTraffic software for this movement was approximately 27 seconds under existing conditions. The delay reported by SimTraffic appears to more accurately reflect actual conditions in the field. This may be because drivers completing the northbound left-turn movement at this intersection are taking shorter gaps due to the high volume on SW Tualatin Road than the gaps assumed in Synchro software. Therefore, we estimate this northbound left-turn movement will operate at an LOS E (corresponding with a 40-second delay) under 2024 post-development conditions, as reported by SimTraffic software.

## Intersection Queuing Analysis

An intersection queuing analysis was conducted for the study area intersections for both the AM and PM peak hours to evaluate any potential queue spillbacks.

### **Methodology**

The 95th percentile queues during the AM and PM peak hours were estimated using Synchro and SimTraffic software. Queue demand results were rounded to the nearest 25 feet to represent average vehicle lengths. Because queues are based on an average of five (5) traffic simulations using random arrivals, some fluctuation in results can be anticipated, particularly for movements that are near or over-capacity.

Available queue lengths were estimated using Google Earth Pro software and rounded to the nearest 5 feet. For turn lanes, two (2) available storage values are stated: the first represents the striped storage and the second is the effective storage, or the length physically available regardless of striping, such as a center turn lane upstream of a striped left-turn lane at an intersection. Although travel lanes have no storage defined by striping, two (2) values are reported for through travel lane storage at signalized locations: the first is the distance to an upstream driveway; the second is the distance to an upstream public street intersection.

### ***Findings***

The 95th percentile queues obtained from SimTraffic for the AM and PM peak hours are presented in Table 8. The detailed SimTraffic reports are provided in Appendix J for reference.

As presented in Table 8, queues are projected to be accommodated within existing storage areas at most intersections. The OR 99W/SW124th Avenue, SW 124th Avenue/SW Tualatin Road, and SW Tualatin Road/SW Teton Avenue intersections are projected to have queues that exceed the available queue storage areas under 2024 post-development conditions. This is expected to occur during the peak 15-minute periods of the AM and PM peak hours. For the remainder of the peak hours, queues are mostly projected to be accommodated under existing storage areas, as presented in Table 9.

	NBL	95/170	<b>75</b> / <b>225</b>	75/125
	NBR	30/>1,000	75/50	75/50

As presented in Table 9, the queues for the northbound left-turn movement at the SW Tualatin Road/SW Teton Avenue are projected to be accommodated within the existing storage area for the remainder of the PM peak hour. At the SW 124th Avenue/SW Tualatin Road intersection, the queues for the southbound left-turn movement during the PM peak hour are projected to exceed the available storage length for the remainder of the PM peak hour; however, this queue is not worsened by the addition of new Lam office trips. At the OR 99W/SW 124th Avenue intersection the queues for the southbound left-turn lanes are projected to be accommodated within the existing storage area during the remainder of the PM peak hour.

## VII. WARRANTS

The 2001 Novellus IMP approval identified that potential improvements may be needed at the SW Leveton Drive/SW 108th Avenue intersection and along SW 108th Avenue (left-turn lanes) with future development of the site. Therefore, traffic signal and turn-lane warrants were reviewed using 2024 post-development volumes for the AM and PM peak hours. The analysis summary for signal, left- and right-turn lane warrants is presented below. The warrant analysis calculations are provided in Appendix K for reference.

### Traffic Signal

The *Manual on Uniform Traffic Control Devices* (MUTCD), 2009 Edition, provides guidance and standards on the evaluation of traffic conditions to determine the need for traffic signalization at unsignalized intersections. A screening level comparison of peak traffic volumes with the lowest MUTCD volume threshold (100 vehicles per hour for the minor street approach) was performed to determine if a more detailed signal warrants analysis should be performed for the SW Leveton Drive/SW 108th Avenue intersection.

The MUTCD Warrant 3, Peak Hour volume thresholds are not met at the SW Leveton Drive/SW 108th Avenue intersection with the proposed office building. Therefore, no additional analysis was prepared.

We also reviewed hourly volumes for the SW Tualatin Road/SW Teton Avenue intersection to determine if a signal at this location is appropriate to mitigate the long delay for the northbound left-turn movement. The projected 2024 post-development traffic volumes at this location do not meet the thresholds for Warrant 1 (8-Hour Vehicular Volume), Warrant 2 (Four-Hour Vehicular Volume), and Warrant 3 (Peak Hour Vehicular Volume). Additionally, the crash analysis did not show excessive crashes at this intersection, nor any fatalities or pedestrian/bicyclist crashes within the last five (5) years of crash data. Because the SimTraffic analysis showed delays for the northbound left-turn movement are closer to the observed delays in the field, we don't recommend any improvements at this location.

### Turn Lanes

Turn-lane criteria were reviewed for the proposed driveways on SW 108th Avenue using the left- and right-turn lane criteria established by the Texas Transportation Institute (TTI) for unsignalized intersections.

SW 108th Avenue is currently a two-lane roadway with no existing turn lanes into the site. While the estimated left-turn volumes at the proposed site accesses are high, the opposing traffic volumes are projected to be well below the threshold for either left- or right-turn lanes. Additionally, the delays for the turn movements at the site driveways are estimated to be relatively low. Therefore, no turn lanes are proposed on SW 108th Avenue or on SW Leveton Drive.

## VIII. RECOMMENDATIONS AND MITIGATION

All study area intersections currently operate within City of Tualatin mobility standards except the SW Tualatin Road/SW Teton Avenue intersection. The northbound left-turn movement at this location currently has a delay greater than 90 seconds which exceeds the City's LOS E standard for an unsignalized intersection, as reported by Synchro software; however, video observations of existing conditions show delays for this movement are closer to 14 seconds. Similarly, the delay reported by SimTraffic for existing conditions is approximately 27 seconds. Therefore, we estimate the delay under 2024 post-development conditions will be approximately 40 seconds as reported by SimTraffic software, and corresponding with an LOS E.

All other study area intersections are projected to operate at acceptable levels, as reported by Synchro software. While queues during the peak 15-minute periods of the morning and afternoon show some queuing that exceeds available storage, queues for the remainder of the AM and PM peak hours are expected to be accommodated within existing queue storage areas. Therefore, no other improvements are recommended at this time.

**SCOPING MATERIAL**

# MACKENZIE.

June 30, 2022

City of Tualatin  
Attention: Tony Doran  
18880 SW Martinazzi Avenue  
Tualatin, OR 97062

Re: **Lam Research New Office Building**  
*Transportation Impact Analysis Scoping*  
Project Number 2220087.00

Dear Tony:

Mackenzie has prepared this scoping letter in advance of preparing the required Transportation Impact Analysis (TIA) for the proposed new office building for the Lam Research campus in Tualatin, Oregon.

## SITE CONDITIONS

### Existing

The Lam Research campus is bounded by SW Tualatin Road to the north, SW 108th Avenue to the east, SW Leveton Drive to the south, and JAE Oregon to the west. The site currently has three full-movement driveways on SW Leveton Drive, a gated access on SW 108th Avenue, and a gated fire access from Quackenbush Lane, opposite SW 115th Avenue. The existing building area is currently 553,140 square feet (SF). There are currently approximately 1,270 seated/office staff and approximately 975 manufacturing staff working 5 AM to 5 PM and 5 PM to 5 AM.

### Proposed

An approximately 120,000 SF office building is proposed just north of SW Leveton Drive between the existing Center and East Access. Up to 600 office staff are planned to occupy the proposed building, with fewer than 10% working remotely. Additional surface parking for up to 500 spaces is proposed south of the existing surface parking and north along SW 108th Avenue. The buildout year for the new office building is assumed to be 2024.

The existing East Access is proposed to be narrowed and limited to trucks serving the new building. With loss of this access for employees, two (2) new driveways are proposed on SW 108th Avenue with direct access to the expanded parking area. The North Access is proposed to be aligned opposite the north driveway serving Olympic Controls. The South Access is proposed approximately 445 feet south of the North Access, between driveways for Ascentec Engineering.

## TRIP GENERATION

Trip generation estimates were developed with the use of the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition. The City requires the reasonable worst case for trip generation be analyzed. Therefore, data for ITE's "General Office Building" (LUC 710) was utilized to estimate trips for the proposed office.

P 503.224.9560 • F 503.228.1285 • W [MCKNZE.COM](http://MCKNZE.COM) • RiverEast Center, 1515 SE Water Avenue, #100, Portland, OR 97214

ARCHITECTURE • INTERIORS • STRUCTURAL ENGINEERING • CIVIL ENGINEERING • LAND USE PLANNING • TRANSPORTATION PLANNING • LANDSCAPE ARCHITECTURE  
Portland, Oregon • Vancouver, Washington • Seattle, Washington

**TABLE 1 – PROPOSED TRIP GENERATION**

ITE Code	Land Use	Size	Trip Type	AM Peak Hour			PM Peak Hour			Daily
				In	Out	Total	In	Out	Total	
710	General Office Building	600 Employees	Total	262	36	298	47	230	277	2,002

## TRIP DISTRIBUTION

Site trip distribution has been modified slightly from the original master plan based on driveway counts from 2018 and 2022. The following trip distribution is proposed:

- 40% to/from the north on SW 124th Avenue (to access Highway 99W)
  - 25% to/from the north on Highway 99W
  - 15% to/from the south on Highway 99W
- 5% to/from the east on SW Tualatin Road
- 5% to/from the south on SW 118th Avenue
- 15% to/from the south on SW 124th Avenue
- 35% to/from the south on SW 108th Avenue via SW Herman Road

## STUDY AREA

The City's *Traffic Study Requirements* document requires that all intersections within a 1/4-mile radius of the project site be included as part of the study area. The following intersections, including site driveways, are located within a 1/4-mile radius:

- SW Leveton Drive/SW 118th Avenue
- SW Leveton Drive/SW 108th Avenue
- SW Tualatin Road/SW 108th Avenue
- SW Leveton Drive/West Access
- SW Leveton Drive/Center Access
- SW Leveton Drive/East Access
- SW 108th Avenue/North Access
- SW 108th Avenue/South Access

We will include a review of left turns to and from the existing driveway near the proposed South Access on SW 108th Avenue. No Washington County intersections are proposed because projected trips are not expected to meet the threshold of 10% impact of the roadway's average daily traffic (ADT).

## TRANSPORTATION IMPACT ANALYSIS

Based on the City's traffic study requirements, as well as the required scope for the new Lam Research office building, the TIA will review AM and PM peak hour conditions at the study area intersections for the following scenarios:

City of Tualatin  
Lam Research New Office Building  
Project Number 2220087.00  
June 30, 2022  
Page 3

- 2022 Existing
- 2024 Pre-Development without New Office Building
- 2024 Post-Development with New Office Building

Existing traffic counts collected on Thursday, June 9, 2022 reflect a portion of Lam office staff telecommuting. While a review of historical and existing traffic counts on I-5 just north of the Nyberg Street exit shows that existing traffic in the greater Tualatin area may be comparable to pre-COVID traffic, existing counts adjacent to the Lam site are lower due to some staff currently telecommuting.

Lam Research does not currently have a permanent hybrid work plan. Therefore, we propose to growth adjust existing traffic counts to match 100% on-site attendance by applying an adjustment factor of 1.92 in the AM peak hour and 1.28 in the PM peak hour to site trips. These adjustments were based on the actual 2018 and 2022 turning movement volumes at the site driveways. The AM peak adjustment is higher than the PM peak adjustment, likely due to office staff entering the site later in the day, outside the morning peak between 7 AM and 9 AM, while continuing to exit the site during the afternoon peak between 4 PM and 6 PM. These modified site trips will be carried through the adjacent roadway network as needed, similar to in-process trips, to estimate traffic volumes without the current remove work scenario.

The TIA will also include the following analysis components:

- 1% annual background growth per ODOT's 2040 Future Volumes table for OR 99W south of 124th Avenue.
- Intersection capacity analyses will be conducted at the study area intersections using the *Highway Capacity Manual* (HCM) 6 methodology.
- Crash data will be compiled and evaluated for safety concerns.
- Intersection sight distance evaluations will be based on AASHTO methodology for the proposed site access points.
- Intersection queuing, turn-lane warrants, and signal warrants will also be evaluated where appropriate.

Please confirm the proposed trip generation, trip distribution, study area, and TIA analysis components are acceptable for the required TIA.

Please contact me at [jjones@mcknze.com](mailto:jjones@mcknze.com) or 971-346-3741 if you have any questions or comments regarding the information presented in this scoping letter.

Sincerely,

Janet Jones, PE  
Associate | Traffic Engineer

Hi Clara,

In the Traffic Study area, please also include the intersection of Tualatin Road with Teton Avenue, which is just a bit to the east of the project. We have received concerns from the public about the effect of development traffic on the Tualatin/Teton intersection.

Thanks,

Mike McCarthy, P.E.

Hi Clara,

Please also ask Jennifer about a project on Myslony St called Hedges Creek.

The River Ridge project need not be considered – they would need additional land use approvals before they could build something that would generate enough traffic to need to be studied.

Thanks,

Mike McCarthy, P.E.

Hi Clara,

The numbers and intersections below seem reasonable.

The Herman Road project is under construction. The River Ridge project has not been built yet. The Columbia Roofing project is old enough it need not be considered.

Another in-process development is the Tualatin Logistics Park on the site of the Island Greens driving range/mini golf site. Please contact Jennifer Danziger at Lancaster-Mobley to get the latest numbers for it.

Tony – please chime in if there are other in-process developments that would affect this study area.

Thanks,

Mike McCarthy, P.E.

**Subject:** RE: Lam Research New Office (PRE2-0017) - TIA Scoping

Mike,

Good morning! My name's Clara Layton, I'm helping Janet with the TIA for the new Lam Research office building.

Thank you for providing comments on the TIA scoping materials. Attached are figures presenting our current trip distribution and traffic assignment assumptions, showing all new trips added to each study intersection. These trips are based on ITE Trip Generation data for a General Office Building land use based on the 120-KSF building area, as summarized below:

LUC	Land Use	Size	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
710	General Office Building	120 KSF	172	24	196	33	160	193	1,360

Based on the TIA requirements document you provided, we will be including all of the following intersections in our study area, as all (with the exception of Tualatin/108th, which is a key frontage intersection) will have at least 60 trips added in one hour:

1. Pacific Highway W (OR-99W)/SW 124th Avenue
2. SW Tualatin Road/SW 124th Avenue
3. SW Tualatin Road/SW 108th Avenue
4. SW 108th Avenue/North Access
5. SW 108th Avenue/South Access
6. SW Leveton Drive/SW 124th Avenue
7. SW Leveton Drive/SW 118th Avenue
8. SW Leveton Drive/West Access
9. SW Leveton Drive/Center Access
10. SW Leveton Drive/East Access
11. SW Leveton Drive/SW 108th Avenue
12. SW Herman Road/SW 108th Avenue

To your question, there is no current plan for site traffic to access off of NW Tualatin Road, so we do not plan to analyze the driveway opposite NW 115th Avenue.

While we continue to prepare our TIA report, are there any current in-process projects that the City anticipates will add trips to our study intersections?

Thanks.

Clara Layton | she/her/hers

**Subject:** RE: Lam Research New Office (PRE2-0017) - TIA Scoping

Hi Janet,

Thank you for sending in the TIA scoping letter for the new Lam Research office building.

The scoping letter for the LAM project generally looks good. A few notes/comments:

In case you haven't seen it already, our traffic study requirements have been recently posted on our website at:

[Tualatin Traffic Study Requirements | The City of Tualatin Oregon Official Website](#)

We typically use the ITE Trip Generation rates by the size of building, instead of the number of employees.

Our criteria for determining the study area is:

1. All proposed site access points to the public street system.
2. All roads and intersections along the frontage of the subject property.
3. Any road or intersection where the proposed development would be anticipated to generate more than 500 additional vehicle trips per day or more than 60 vehicle trips in a single hour. If a two-way-stop-controlled intersection functions acceptably and the proposed development would add less than 50 trips per day on the minor leg, it need not be included by this criterion.
4. The route(s) trucks would use from the site to the arterial system must be identified for all developments and analyzed for truck travel if used for more than 10 truck trips per day.
5. Walking and cycling routes to transit stops within  $\frac{1}{4}$  mile, parks and retail areas within  $\frac{1}{2}$  mile and, for residential developments, schools within 1 mile.
6. Any other areas where, in staff judgement, traffic study is needed to protect the public interest.

Off-site intersections are typically identified for study based on the number of new trips that would be using them based on category 3 above – or as a truck route or walking/cycling route for category 4 or 5. Please send us your estimation of the new trips on the transportation network and let us know which intersections meet the 500/day or 60/hour new trip threshold. It appears this may include 124<sup>th</sup>/Tualatin Rd, 124<sup>th</sup>/Leveton, Herman/108<sup>th</sup>, and perhaps others such 124<sup>th</sup>/Hwy 99W.

Is the plan for site traffic to use the driveway off of Tualatin Road opposite 115<sup>th</sup> Ave? If so, that location needs to be studied.

The methodology to adjust for full onsite attendance and for future growth appear to be acceptable.

Of course, please feel free to call or e-mail me with any questions.

Thanks,

Mike McCarthy, P.E.

**Subject:** Lam Research New Office (PRE2-0017) - TIA Scoping

Tony and Mike,

I just provided you with a link to download the TIA scoping letter for Lam's proposed new office building via a separate email. Please let me know if you did not receive the email or were unable to download the document.

We also wanted to confirm the frontage improvements that will be required for SW 108th Avenue. At the pre-app meeting you noted that a reverse planter strip design may be an option. I have copied our Civil Engineer, Brent Nielsen, who can provide more information once we receive additional survey data next week.

We appreciate your collaboration on this. I will be out of the office next week but Brent Ahrend and Clara Layton (both copied) will be available to answer questions as needed.

Thank you,

# Tualatin Shuttle

### FLAG TUALATIN SHUTTLE DOWN

If you are on a residential street along the route, and not near a designated stop, you can "flag" or simply wave using your full arm to signal the Tualatin Shuttle bus driver to stop. Be sure to stand on the correct side of the road.

### SOCIAL DISTANCING

To allow for social distancing, Ride Connection is allowing only four passengers on the bus at one time. Sorry for the inconvenience.

### DEVIATIONS

We will deviate off the route to pick you up or drop you off for one leg of your trip. Deviation requests must be called in one day in advance. To call in for a deviation, please call 503-226-0700 between 7:30am and 5pm Monday-Friday. TTY: 711.

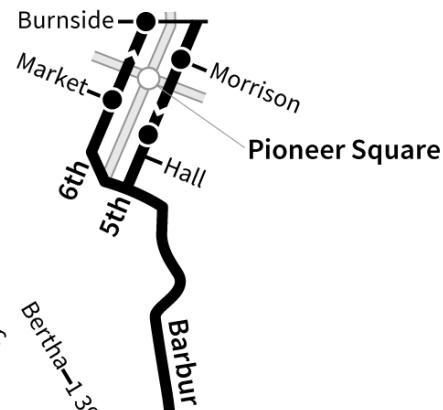

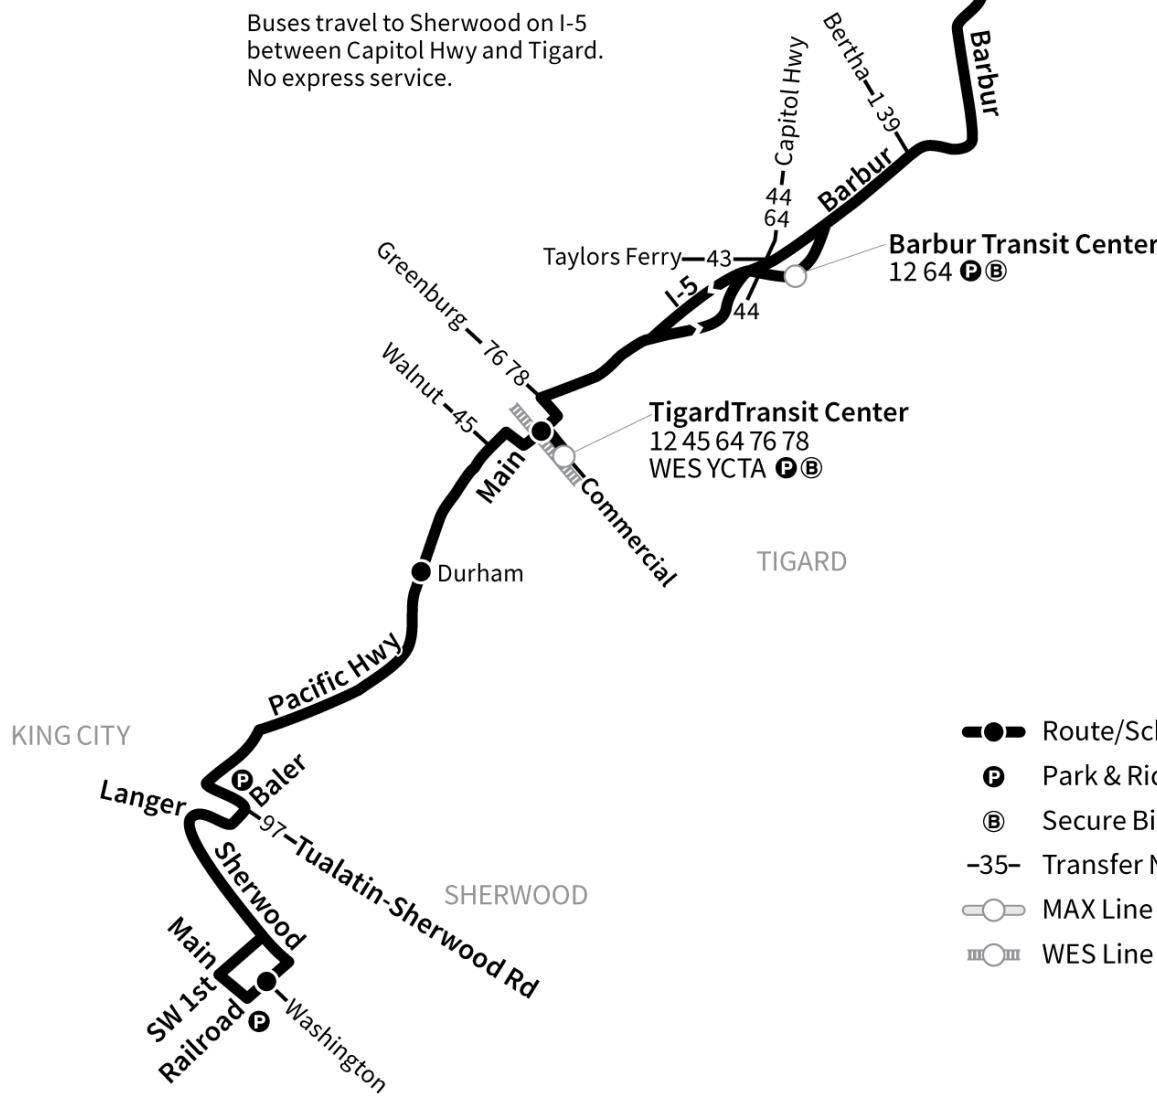

Deviations are not reservations. If the shuttle reaches capacity, we will make every effort to accomodate you.

The service operates **Monday through Friday** and it's free.

## 94-Pacific Hwy/Sherwood

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.

## Site Trips

### Trip Generation

To estimate trips that will be generated by the redevelopment, trip rates from the *Trip Generation Manual*<sup>1</sup> were used based on the number of existing driving range tees, number of golf holes, and the proposed square footage.

#### Existing Site Development

The site is currently occupied by Tualatin Island Greens Golf Center and Grill. The golf facilities include a driving range and an 18-hole miniature golf course. The driving range includes 43 tees with synthetic mats for year-round use and additional grass tees available in the spring and summer. These facilities are open from 9:00 AM to 8:00 PM, September through March, and from 9:00 AM to 9:00 PM, April through August. The site also includes a restaurant with hours from 10:30 to 6:30 PM, September through March, and 10:30 AM to 7:30 PM, April 9:00 AM to 8:00 PM from September to March through August.

Trip generation was estimated based on the golf facilities; the restaurant is assumed to be used primarily by the golfing customers. Trip data for both types of golf facilities are limited; therefore, the following assumptions were made to estimate trips for the site:

- The trip data for the miniature golf land use code (ITE LUC 431) is limited to a single survey during the weekday PM peak period. No activity is assumed during the morning peak hour. The weekday PM peak hour trip rate is very low and may vary over the year with more activity during summer months and less during winter months. However, we suggest that credit for the facility should be included in the trip generation for the site. No daily data is available; therefore, the weekday rate was assumed to be 10 times the daily rate.
- The trip data for a driving range (ITE LUC 432) is limited to a single survey for the morning and weekday periods but has seven surveys for the weekday PM peak period. While the driving range does not open until 9:00 AM, retail and maintenance staff need to be on site before 9:00 AM. Two of the ITE survey sites also had staff data available with counts of 14 and 15 employees. Additionally, food service deliveries also typically occur in the morning. Therefore, the morning peak hour trips were included in the trip generation estimates. Trip estimates were prepared based on the 43 year-round tees.

One of the concerns that was raised about prior trip generation estimates is that the golf site peaks may occur later than the peaks of the street traffic or the peaks of industrial development. To acknowledge this may be the case for the traffic study, a 20 percent discount in peak hour trips is proposed.

The resulting trip generation is presented in Table 3.

---

<sup>1</sup> Institute of Transportation Engineers (ITE), *Trip Generation Manual*, 11th Edition, 2021.

**Table 3: Trip Generation Summary – Existing Land Uses**

Land Use	ITE Code	Size	AM Peak Hour			PM Peak Hour			Weekday Total
			In	Out	Total	In	Out	Total	
Driving Range	432	43 Tees	10	7	17	24	30	54	586

<i>20% Discount for Offset Peak Hour</i>			-2	-1	-3	-5	-7	-12	-130
Total			8	6	14	21	27	48	516

### **Proposed Site Development**

Specht Properties, Inc. proposes to redevelop the site with a single industrial building enclosing 452,795 SF of gross floor area with 115 dock doors and 4 grade doors. As proposed, the site includes 197 parking spaces and 133 trailer parking spaces. Some accessory office space is included in the building layout.

The proposed development is speculative with flexible space that could accommodate a single tenant or multiple tenants. Specht has developed similar properties in the Portland metropolitan area. The locations, sizes, and tenant descriptions are attached to this memorandum, each with a recent photo of the site. The sites range from a single 290,000-SF building to three buildings totaling more than 733,000 SF. Only two of the sites have any manufacturing tenants and a portion of those operations are warehousing and distribution. Of the total 1.87 million SF of space, approximately 18 percent is leased to tenants whose operations include manufacturing.

A range of potential industrial land use assumptions was considered to estimate the trip generation for the site. Trip estimates were lowest for ITE LUC 154, High-Cube Transload and Short-Term Storage Warehouse, and highest for LUC 110, General Light Industrial, and LUC 156, High-Cube Parcel Hub Warehouse. Table 4 summarizes the total and truck trip generation for the range of industrial uses.

While the original traffic scoping suggested a mix of 85 percent warehouse and 15 percent manufacturing based on the available site parking, a much more conservative assumption of general light industrial is assumed for this TIA. A parcel hub warehouse would generate the same number of trips but with a substantially different directional distribution from other industrial uses. The truck trip generation of general light industrial is slightly lower than other uses; however, the variation in the number of trucks generated during the peak hours for the industrial uses is small and the percentage of overall site-generated traffic is very low. Truck percentages for the trip generation were compared with those on the existing roadway and were found to be very similar to the truck percentages on the adjacent roadways.

Table 4: Trip Generation Summary – Potential Industrial Land Uses

Land Use	ITE Code	AM Peak Hour			PM Peak Hour			Weekday Total	Employee Equivalent*
		In	Out	Total	In	Out	Total		
<b>Total Vehicle Trips based on 452,795 SF Industrial Building</b>									
General Light Industrial	110	295	40	335	41	253	294	2,206	636
Manufacturing	140	234	74	308	104	231	335	2,150	1,022
Warehousing	150	59	18	77	23	59	82	774	125
High-Cube Transload and Short-Term Storage Warehouse	154	28	8	36	13	32	45	634	NA
High-Cube Fulfillment Center Warehouse - Non-Sort	155	55	13	68	28	44	72	820	487
High-Cube Parcel Hub Warehouse	156	159	158	317	197	93	290	2,096	NA
<b>Truck Trips based on 452,795 SF Industrial Building</b>									
General Light Industrial	110	3	2	5	3	3	5	114	-
Manufacturing	140	8	6	14	6	8	14	204	-

High-Cube Transload and Short-Term Storage Warehouse	154	4	5	9	2	3	5	100	-
High-Cube Fulfillment Center Warehouse - Non-Sort	155	5	5	9	2	3	5	104	-
High-Cube Parcel Hub Warehouse	156	NA	NA	41	NA	NA	27	262	-

\* Estimated as average number of employees needed to generate the equivalent number of vehicle trips based on KSF

### Total Site Trip Generation

Table 5 summarizes the estimated net trip generation of the site with the assumptions discussed above.

Table 5: Trip Generation Summary (Warehousing)

Land Use	AM Peak Hour			PM Peak Hour			Weekday Total
	In	Out	Total	In	Out	Total	
Existing Land Use	-8	-6	-14	-21	-27	-48	-516
Proposed Land Use	295	40	335	41	253	294	2,206
Net Increase	287	34	321	20	227	246	1,690

The trip generation calculations show that the Tualatin Logistics site assuming general light industrial for the site is projected to generate an additional 321 net trips during the morning peak hour, 246 net trips during the evening peak hour, and 1,690 net trips during the average weekday.

## Trip Distribution and Assignment

The directional distribution of site trips to/from the project site is necessary to identify intersections to be included in the study area of the TIA. The following trip distribution was estimated based on the locations of likely trip destinations and locations of major transportation facilities in the site vicinity:

- Approximately 30 percent of site trips will travel to/from the south along SW 124<sup>th</sup> Avenue
- Approximately 20 percent of site trips will travel to/from the west along SW Tualatin-Sherwood Road
- Approximately 30 percent of site trips will travel to/from the east along SW Tualatin-Sherwood Road
- Approximately 5 percent of site trips will travel to/from the north along SW Cipole Road
- Approximately 15 percent of site trips will travel to/from the north along SW 124<sup>th</sup> Avenue

Trip distribution at the site accesses will depend on the location and configuration of the accesses.

### **Access Scenario 1**

With the first scenario assuming an access on SW 124th Avenue at the southeast corner of the site and an access on SW Cipole Road, the split of traffic between the two accesses is assumed to be 50 percent at each access. A detailed illustration of the distribution for this scenario was presented in the scoping memorandum, which has been included in Appendix A.

The resulting trip assignment is shown in Figure 2.

### **Access Scenario 2**

With the second scenario assuming a limited access on SW 124<sup>th</sup> Avenue at the northeast corner of the site, the split of traffic is assumed to be 65 to 70 percent using the SW Cipole Road access while 30 to 35 percent using the limited access at SW 124<sup>th</sup> Avenue. A detailed illustration of the distribution for this scenario was presented in the scoping memorandum, which has been included in Appendix A.

The resulting trip assignment is shown in Figure 3.

### **Access Scenario 3**

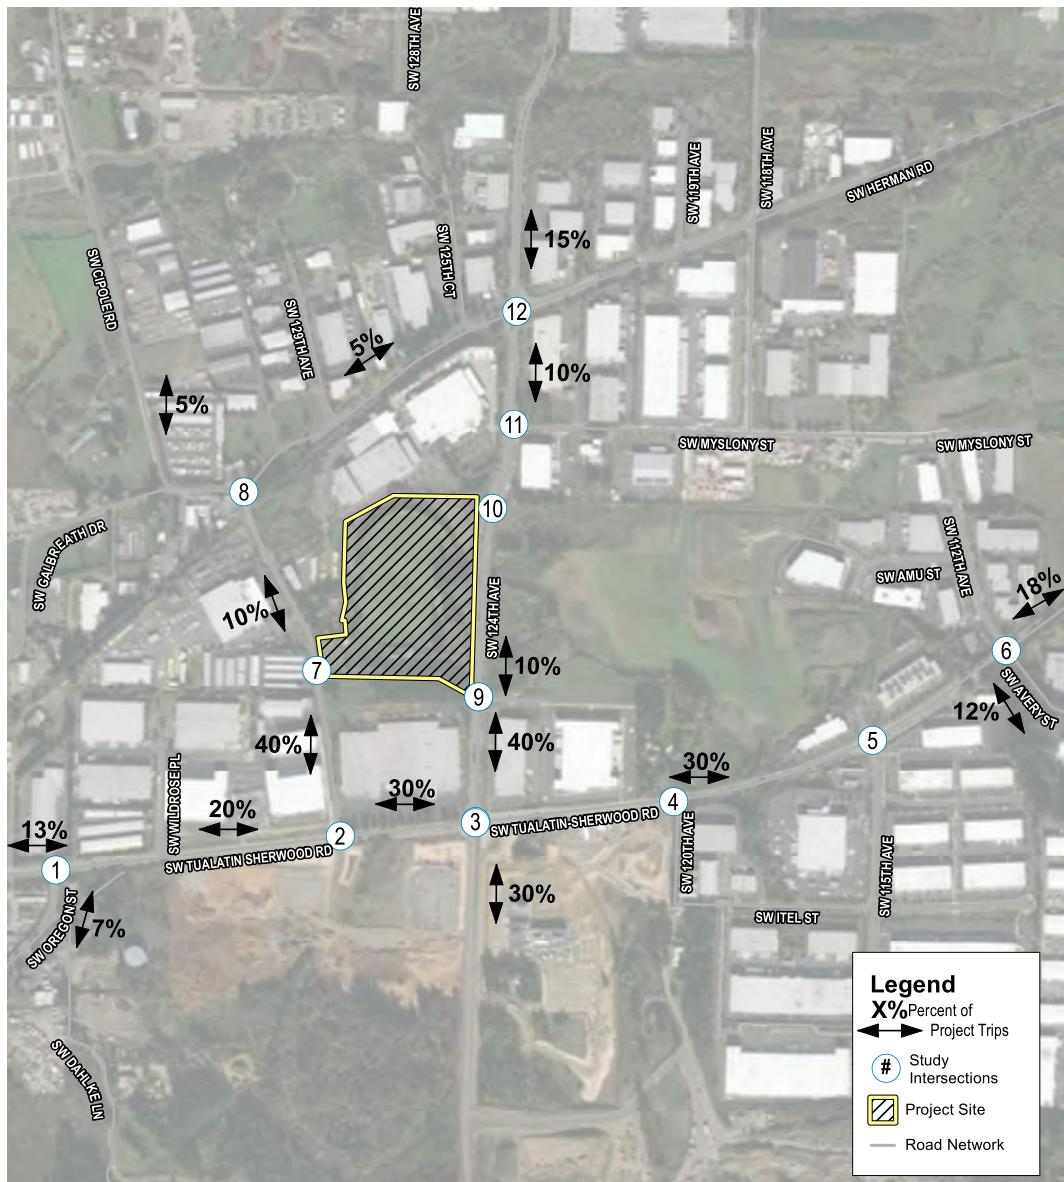

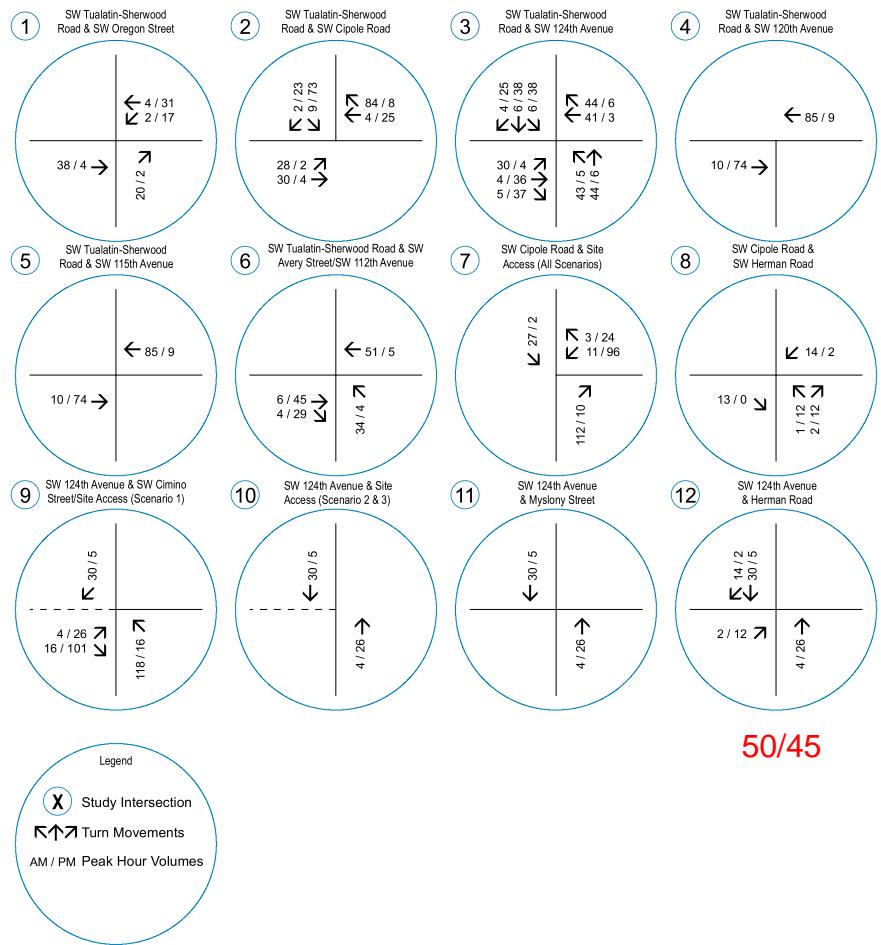

With the third scenario assuming a full access on SW 124<sup>th</sup> Avenue at the northeast corner of the site, the split of traffic is assumed to be approximately 65 percent using the SW Cipole Road access and 35 percent using the access on SW 124<sup>th</sup> Avenue.

The resulting trip assignment is shown in Figure 4.

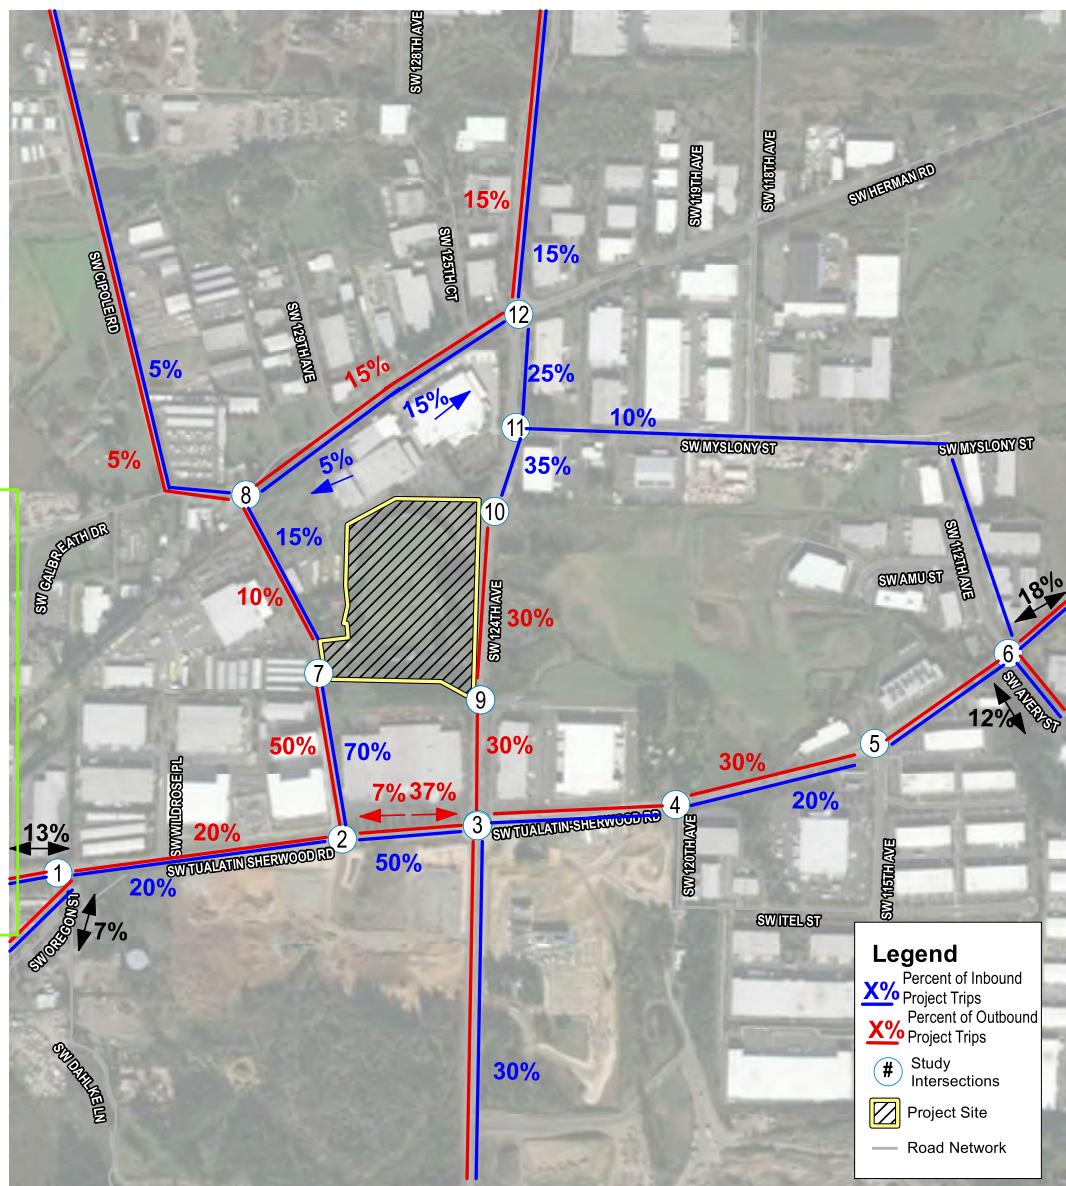

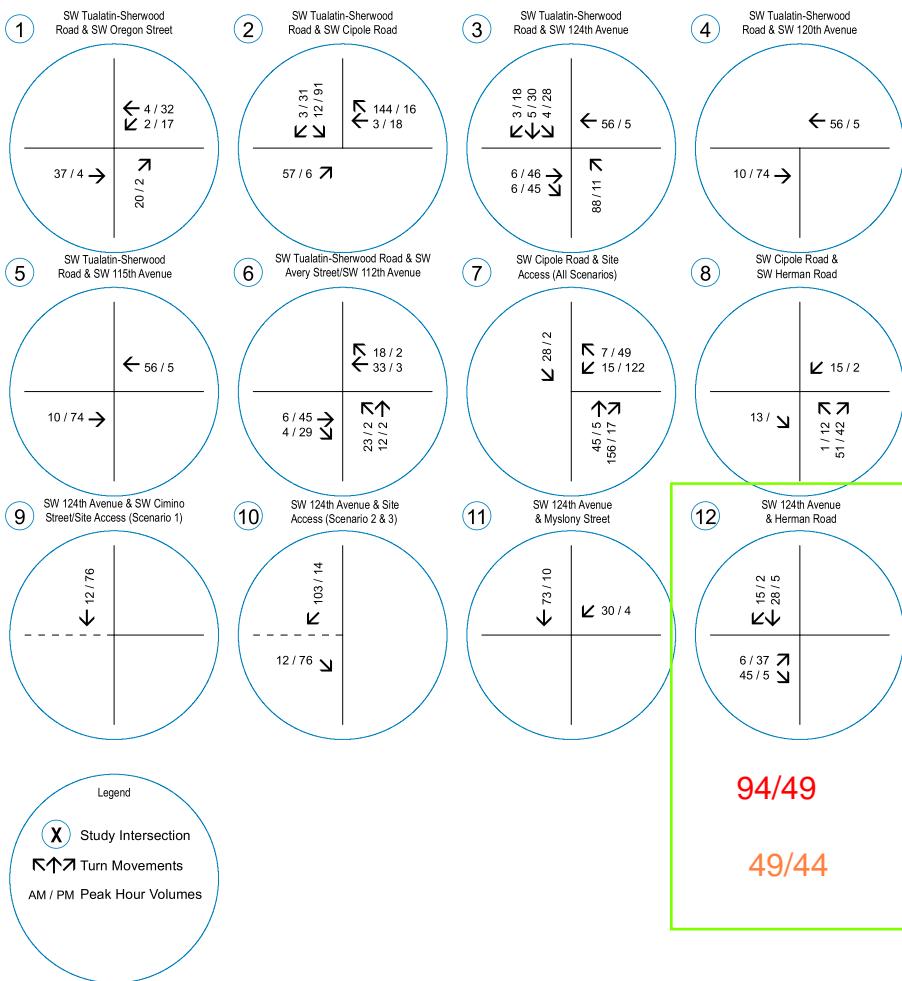

### **Access Scenario 4**

The fourth scenario assumes a full access on SW 124th Avenue at the southeast corner of the site and a limited access on SW 124<sup>th</sup> Avenue at the northeast corner of the site. The split of traffic is assumed to be approximately 35 percent using the SW Cipole Road access, 35 percent using the access on SW 124<sup>th</sup> Avenue opposite SW Cimino Street, and 30 percent using the limited access at the northeast corner of the site.

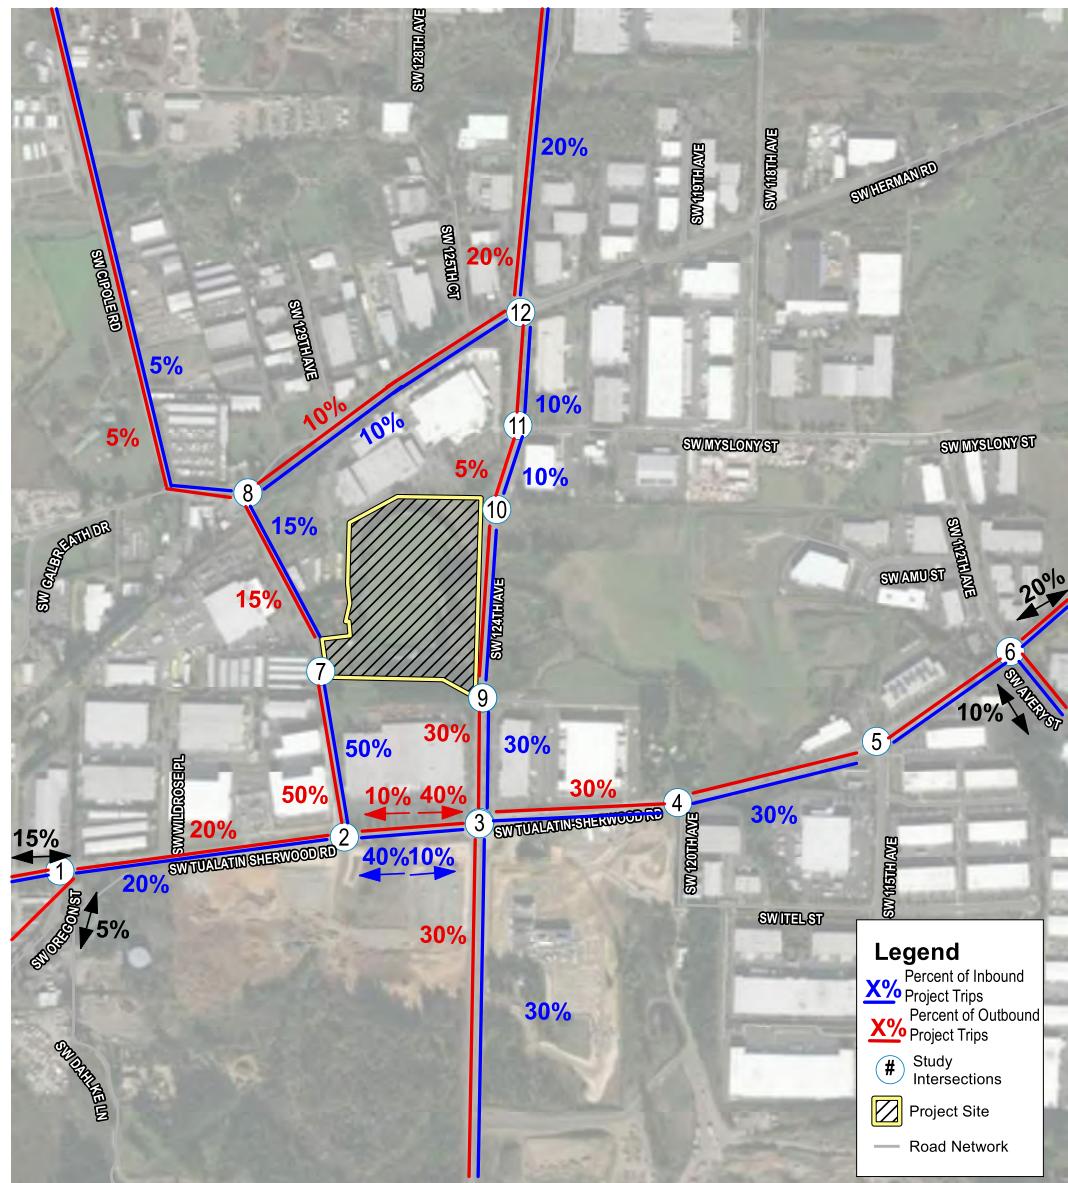

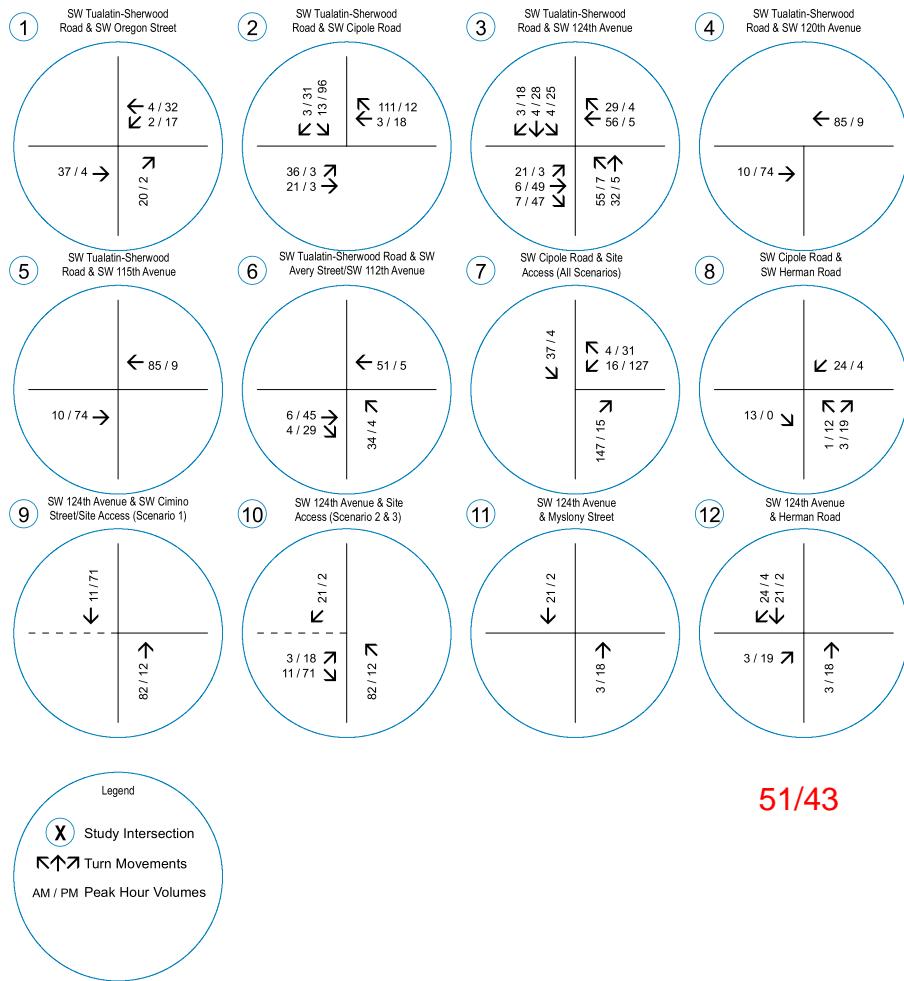

The resulting trip assignment is shown in Figure 5.

## Lu Pacific Development Transportation Impact Study Tualatin, Oregon

Date:  
August 31, 2020

Prepared for:  
Angela Qi  
Lu Pacific Properties, LLC

Prepared by:  
Daniel Stumpf, PE  
Terrington Smith, EIT

## Site Trips

### Trip Generation

#### Total Trips

The proposed Lu Pacific Development will include the construction of two industrial buildings totaling approximately 131,600 square-feet, where approximately 40 percent of the square-footage will be dedicated as manufacturing and approximately 60 percent as warehouse. To estimate the number of trips that will be generated by the proposed development, trip rates from the *Trip Generation Manual*<sup>1</sup> were used. Specifically, data from land use codes 140, *Manufacturing*, and 150, *Warehousing*, were used based on the square-footage of the gross building floor area.

The trip generation calculations show that the proposed development is projected to generate 46 morning peak hour trips, 50 evening peak hour trips, and 344 average weekday trips. The trip generation estimates for the proposed development are summarized in Table 3. Detailed trip generation calculations are included in the technical appendix to this report.

Table 3: Trip Generation Summary (Proposed Development)

	ITE Code	Size/Rate	Morning Peak Hour			Evening Peak Hour			Weekday Total
			Enter	Exit	Total	Enter	Exit	Total	
Manufacturing	140	52,600 SF	25	8	33	11	24	35	206
Warehouse	150	79,000 SF	10	3	13	4	11	15	138
<b>Total</b>			<b>35</b>	<b>11</b>	<b>46</b>	<b>15</b>	<b>35</b>	<b>50</b>	<b>344</b>

Although the aforementioned land uses reflect what the applicant is proposing for development, City of Tualatin staff have requested that analysis be based using trip generation data from land use code 110, *General Light Industrial*. The reason for using this land use code is to reflect potential, conservative impacts to the transportation system which may occur due to a high traffic generating tenant(s) that could lease space within the proposed development.

Utilizing data from land use code 110, based on the square-footage of the gross building floor area, the proposed development could generate up to 92 morning peak hour trips, 83 evening peak hour trips, and 652 average weekday trips. The trip generation estimates for the proposed development, using data from land use code 110, are summarized in Table 4. Detailed trip generation calculations are included in the technical appendix to this report.

<sup>1</sup> Institute of Transportation Engineers (ITE), *Trip Generation Manual*, 10<sup>th</sup> Edition, 2017.

Table 4: Trip Generation Summary (Based on Land Use Code 110)

	ITE Code	Size/Rate	Morning Peak Hour			Evening Peak Hour			Weekday Total
			Enter	Exit	Total	Enter	Exit	Total	
<b>General Light Industrial</b>									
Total Trips	110	131,600 SF	81	11	92	11	72	83	652
Truck Trips	-	20%	16	2	18	2	15	17	130
Standard Vehicle Trips	-	-	65	9	74	9	57	66	522

For the remainder of this study, analyses are performed based on the trip generation presented in Table 4.

### Truck Trips

Per the *Trip Generation Handbook*<sup>2</sup>, relevant data pertaining to truck trip generation is provided for land use codes 130, *Industrial Park*, 150, *Warehousing*, and 152, *High-Cube Warehouse/Distribution Center*. For land use code 130, truck trips accounted for an average of approximately 13 percent of site trips generated, while for code 150 were approximately 20 percent of site trips were considered truck trips. For land use code 152, the majority of truck trips generated were noted to typically occur during off-peak hours, but on average would account for between 9 to 29 percent of peak hour traffic. No specific data pertaining to manufacturing or general light industrial uses is available.

For the purposes of simplicity, it is assumed that approximately 20 percent of the total site trip generation may consist of truck trips. Accordingly, the proposed development is projected to generate 18 morning peak hour truck trips, 17 evening peak hour truck trips, and 130 average weekday truck trips, based on land use code 110. See Table 4 for details regarding the truck trip generation.

Given the surrounding site vicinity is predominately industrial in character, the nearby transportation system was constructed accordingly to best serve the needs of existing and future industrial development. As such, it is expected that a significant majority of truck trips would utilize SW Herman Road, SW Teton Avenue, and SW Tualatin Road to access the major transportation corridors of SW Tualatin-Sherwood Road and SW 124<sup>th</sup> Avenue. From SW Tualatin-Sherwood Road and SW 124<sup>th</sup> Avenue, access to regional transportation facilities, such as SW Pacific Highway, Interstate 5, and Interstate 205, are available.

<sup>2</sup> Institute of Transportation Engineers (ITE), *Trip Generation Handbook*, 3<sup>rd</sup> Edition, 2014.

## Trip Distribution

Based on correspondence and input from City of Tualatin staff, the following trip distribution was estimated and used for analysis:

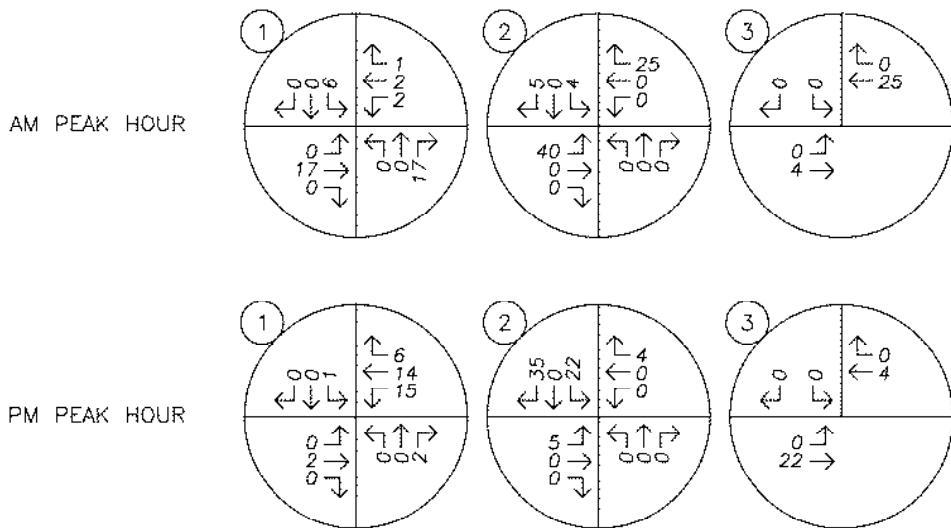

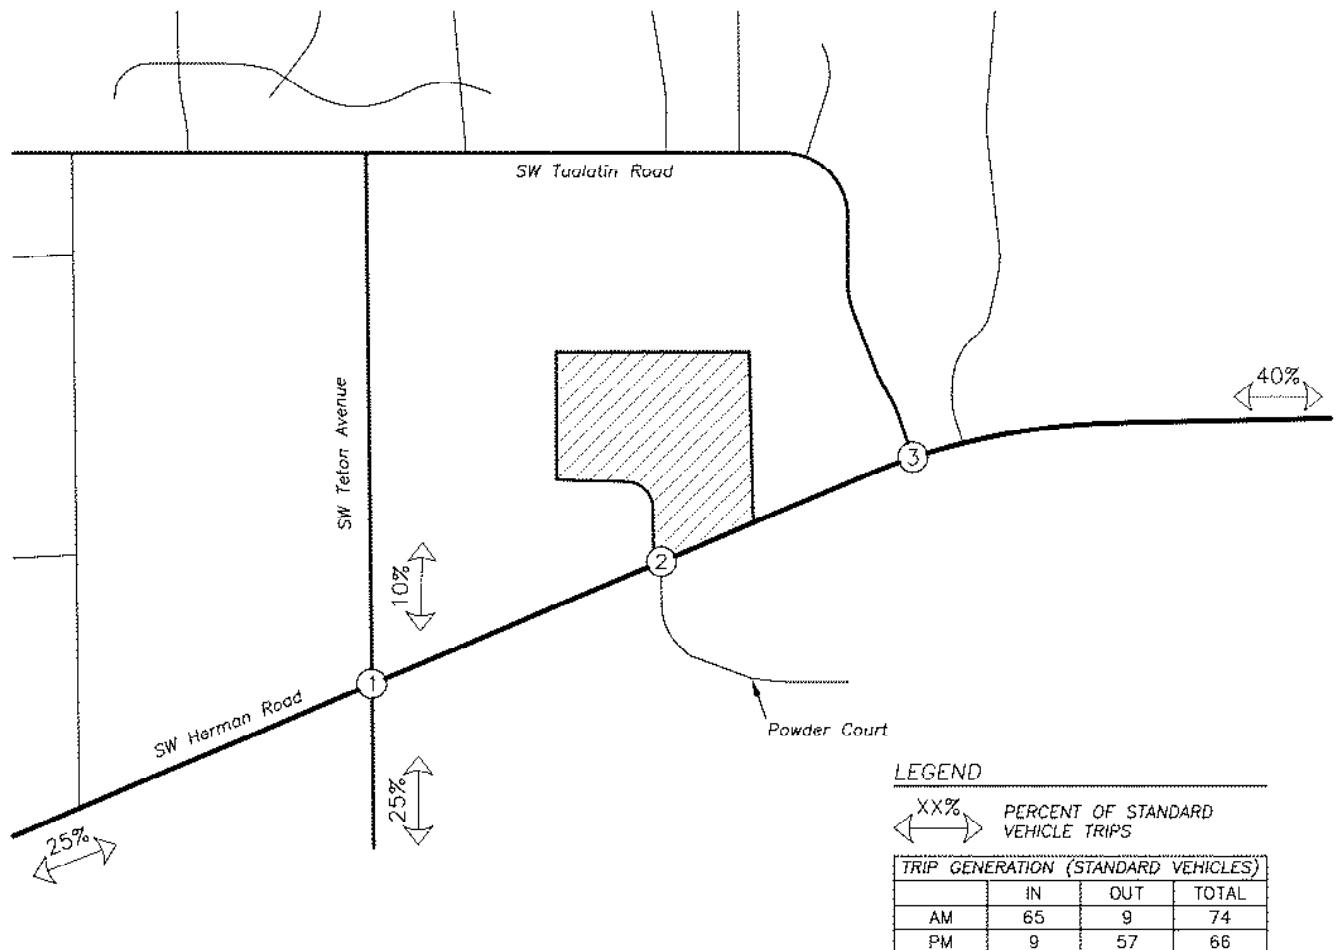

### Standards Vehicle Trips

- Approximately 40 percent of site trips will travel to/from the east along SW Herman Road;
- Approximately 25 percent of site trips will travel to/from the west along SW Herman Road;
- Approximately 25 percent of site trips will travel from the south along SW Teton Avenue; and
- Approximately 10 percent of site trips will travel to the north along SW Teton Avenue.

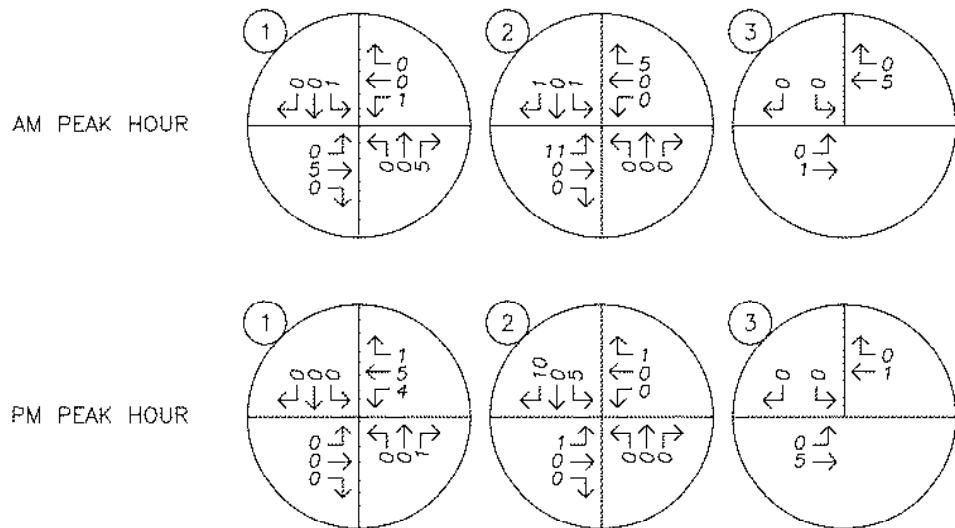

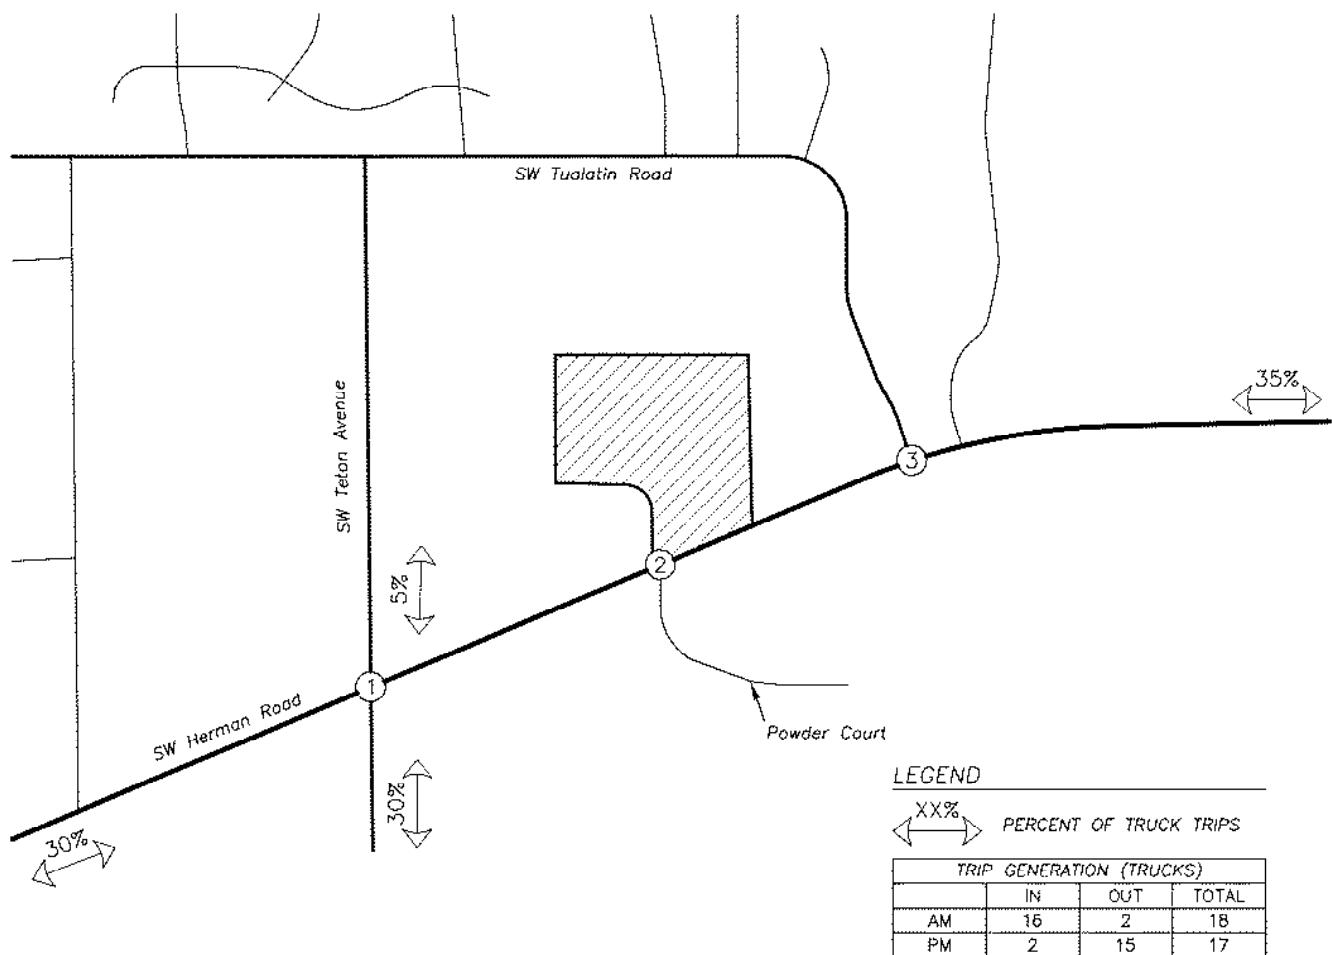

### Truck Trips

- Approximately 35 percent of site trips will travel to/from the east along SW Herman Road;
- Approximately 30 percent of site trips will travel to/from the west along SW Herman Road;
- Approximately 30 percent of site trips will travel from the south along SW Teton Avenue; and
- Approximately 5 percent of site trips will travel to the north along SW Teton Avenue.

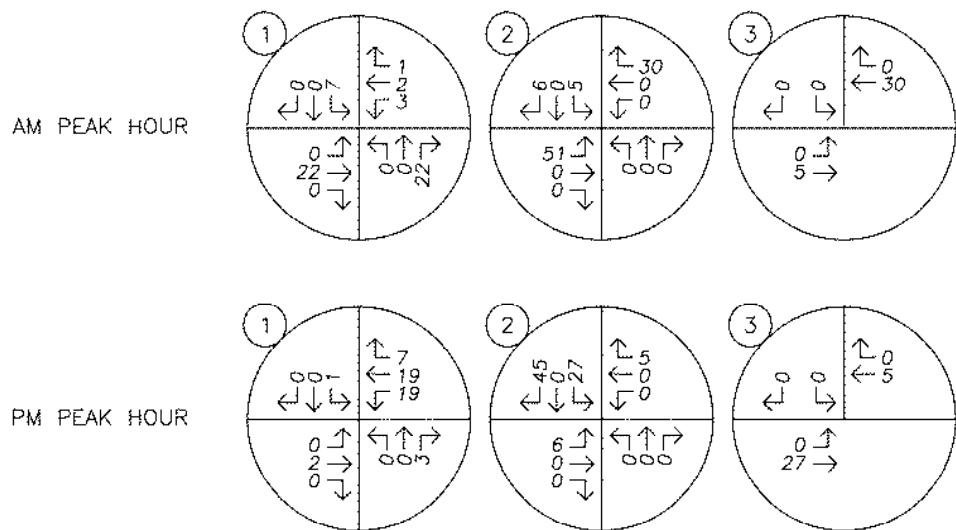

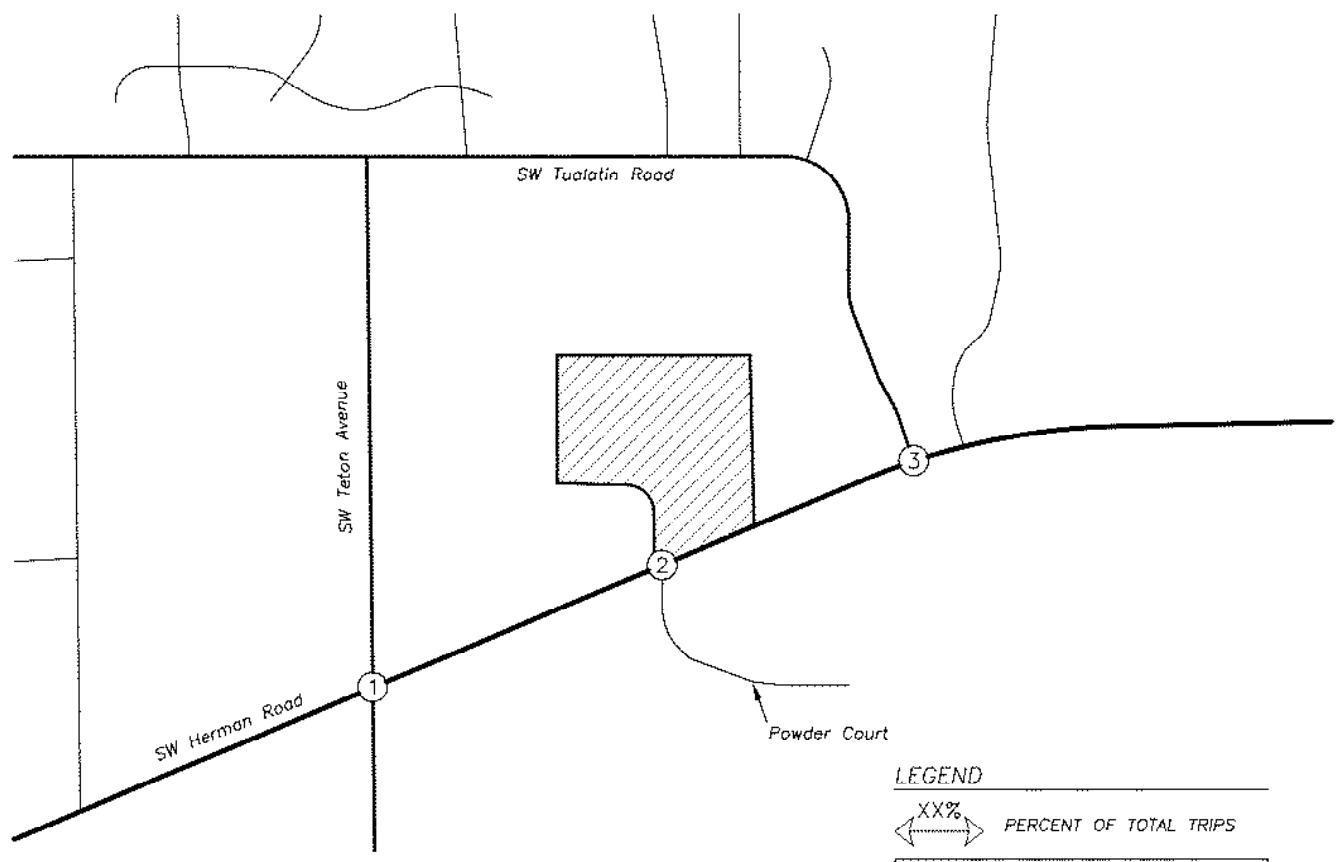

The trip distribution and assignment for the site trips generated by the proposed development during the morning and evening peak hours is shown in Figure 2 through Figure 4. Figure 2 presents site trip assignment for standard vehicles, Figure 3 presents site trip assignment for trucks, and Figure 4 presents site trip assignment for the total trips generated.

# Hedges Creek Industrial Transportation Impact Study Tualatin, Oregon

Date:  
January 6, 2022

Prepared for:  
Sarah Every  
Phelan Development

Prepared by:  
Daniel Stumpf, PE

## Site Trips

### Trip Generation

The proposed Hedges Creek Industrial development will include the construction of three industrial buildings, totaling approximately 442,035 square feet, where approximately 40 percent of the development will consist of manufacturing land uses while the remaining 60 percent will consist of warehousing space. To estimate the number of trips that will be generated by the proposed use, trip rates from the *Trip Generation Manual*<sup>1</sup> were used. Specifically, data from land use codes 140, *Manufacturing*, and 150, *Warehousing*, were used based on the square-footage of the gross building floor area.

The trip generation calculations show that the proposed use is projected to generate a total of 165 morning peak hour trips, 179 evening peak hour trips, and 1,294 average weekday trips. Of these trips, the proposed use is projected to generate 10 morning peak hour truck trips, 13 evening peak hour truck trips, and 240 average weekday truck trips. The trip generation estimates associated with the proposed development are summarized in Table 3 and detailed trip generation calculations are included in the appendix.

Table 3: Trip Generation Summary

	ITE Code	Size	Morning Peak Hour			Evening Peak Hour			Weekday Total
			Enter	Exit	Total	Enter	Exit	Total	
<b>Total Trip Generation</b>									
Manufacturing	140	176,814 SF	91	29	120	41	90	131	840

<sup>1</sup> Institute of Transportation Engineers (ITE), *Trip Generation Manual*, 11<sup>th</sup> Edition, 2021.

## Trip Distribution

The directional distribution of site trips to/from the project site was estimated based on the locations of likely trip destinations, locations of major transportation facilities in the site vicinity, and existing travel patterns at the study intersections. Based on correspondence with City of Tualatin staff and their consulting transportation engineer, the following trip distribution was confirmed and utilized:

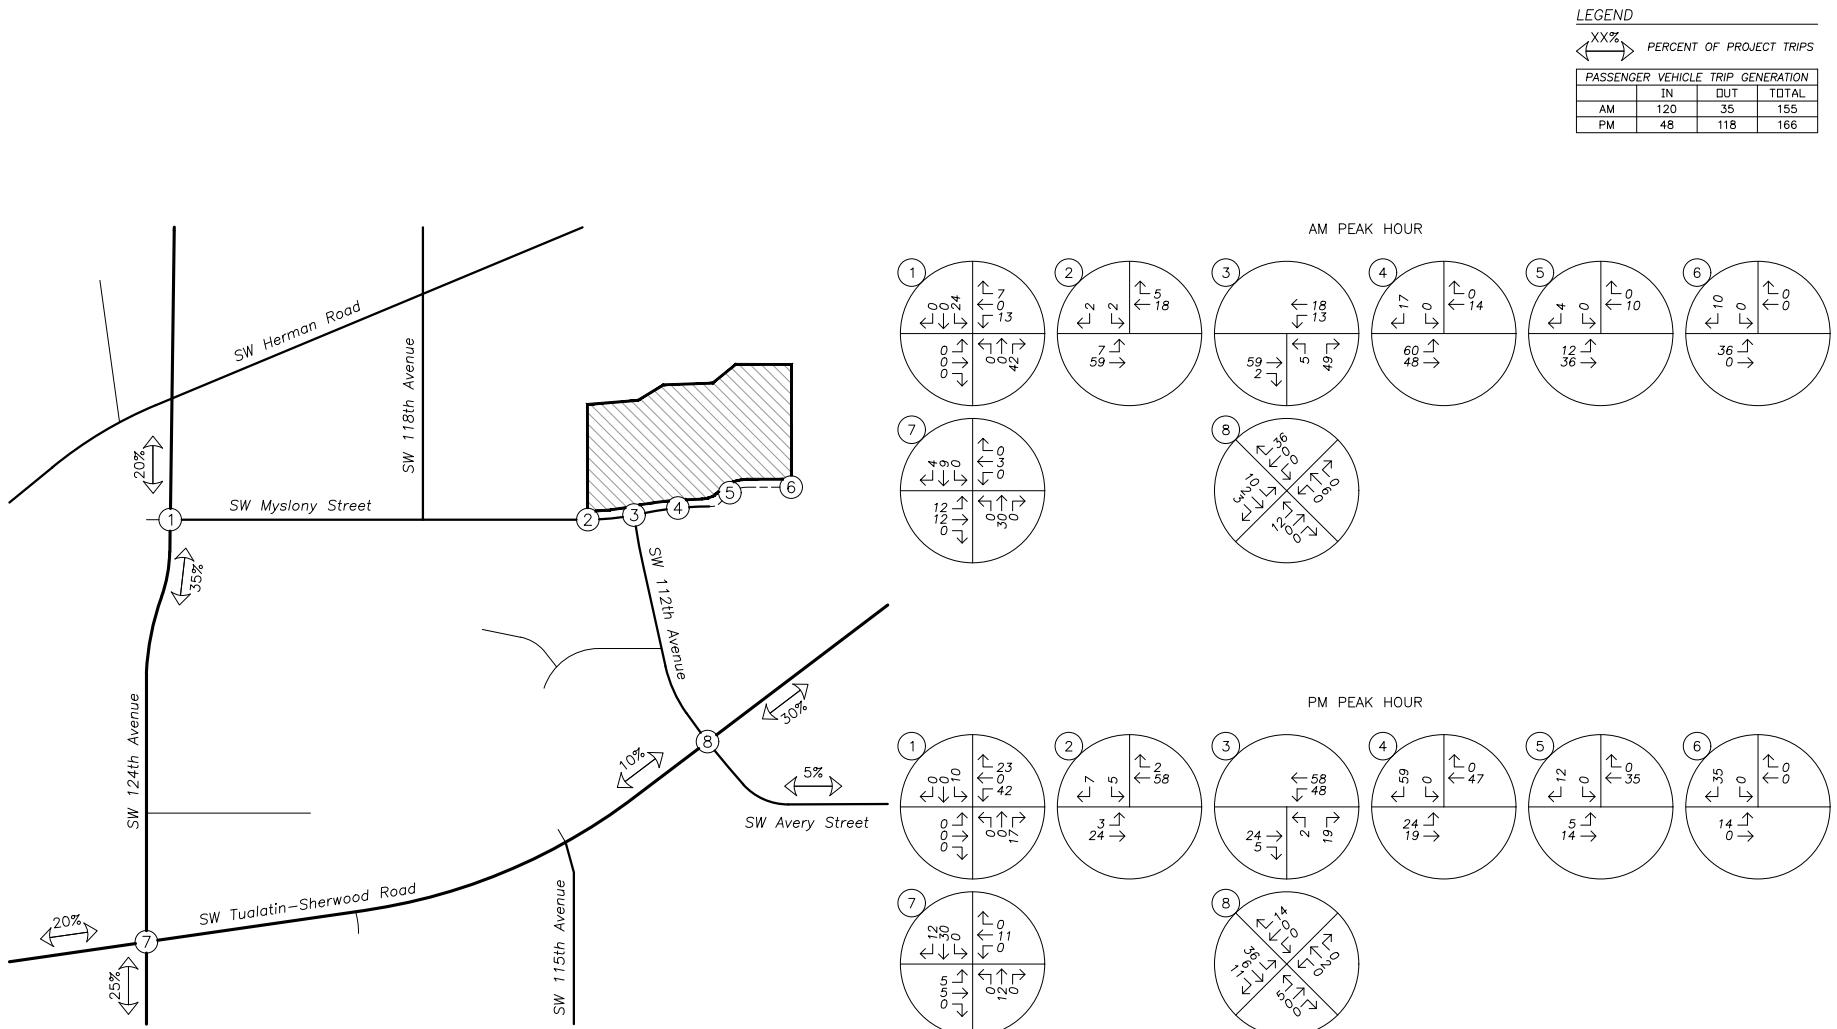

- Approximately 30 percent of site trips will travel to/from the east along SW Tualatin-Sherwood Road;
- Approximately 25 percent of site trips will travel to/from the south along SW 124<sup>th</sup> Avenue (via SW Myslony Street);
- Approximately 20 percent of site trips will travel to/from the west along SW Tualatin-Sherwood Road (split distribution between SW 124<sup>th</sup> Avenue/SW Myslony Street and SW 112<sup>th</sup> Avenue);
- Approximately 20 percent of site trips will travel to/from the north along SW 124<sup>th</sup> Avenue (via Myslony); and
- Approximately 5 percent of site trips will travel to/from the east along SW Avery Street.

Based on the site plan layout, site trip assumed to utilize the site access driveways as follows:

2. West Truck Access at SW Myslony Street:
  - Approximately 25 percent of truck trips will utilize this access.
  - Approximately 10 percent of passenger vehicle trips will utilize this access.
4. West General Access at SW Myslony Street:
  - Approximately 50 percent of passenger vehicle trips will utilize this access.
5. East Truck Access at SW Myslony Street:
  - Approximately 75 percent of truck trips will utilize this access.
  - Approximately 10 percent of passenger vehicle trips will utilize this access.
6. East General Access at SW Myslony Street:
  - Approximately 30 percent of passenger vehicle trips will utilize this access.

The trip distribution and assignment for the site trips generated during the morning and evening peak hours is shown in the following figures:

 Reininstall existing phase (P=phase) vehicle signal

 Reininstall existing pedestrian signal, pushbutton and instructions

SIGNS

 Retain and protect existing aluminum sign

 Retain and protect existing street name sign

LEGEND CONTINUEDCABINETS

 Retain and protect existing remote power source

 Retain and protect existing service cabinet

 Retain and protect existing meter base

 Retain and protect existing terminal cabinet

JUNCTION BOXES

 Retain and protect existing junction box

 Remove existing junction box

 Install 22"x12"x12" (min. dimension)  
precast concrete junction box

 Install 30"x17"x12" (min. dimension)  
precast concrete junction box with concrete apron

VIDEO DETECTION

 Video detection zone for phase (P=phase)

 Retain and protect existing video detection camera

WIRES

 Retain and protect existing wiring

 Remove existing wiring

 Reininstall existing wiring

 Install (N-number) No. 12 type THHN  
(Pedestrian signal system common)

 Install (N-number) No. 16 AWG wire size type THHN wires

LEGEND CONTINUEDCONDUITS

 Retain and protect existing electrical conduit

 Abandon existing electrical conduit

 Install (S-size) inch electrical conduit

 Interconnect conduit (See Interconnect Plan)

 Splice new electrical conduit to existing electrical conduit

FIRE PREEMPTION

 Retain and protect existing fire preemption detector

MISCELLANEOUS

 Retain and protect existing high pressure sodium luminaire

 Retain and protect existing photoelectric control

 Install crosswalk closure barricades with signs (both sides of barricade)

SIGNAL MOUNTING OPTIONS

B = Adjustable bracket assembly w/rain cap(s)/Install 1" metalic chase nipple in lieu of tension when required for wiring)

SIGNAL HEAD TYPES

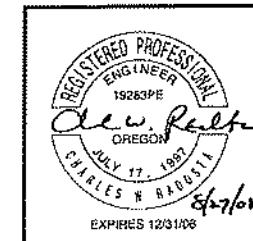

Z = 12", R, 12", Y, 12" G

6L = 12" GLTA, 12" YLTA, 12" FYLTA, 12" GLTA

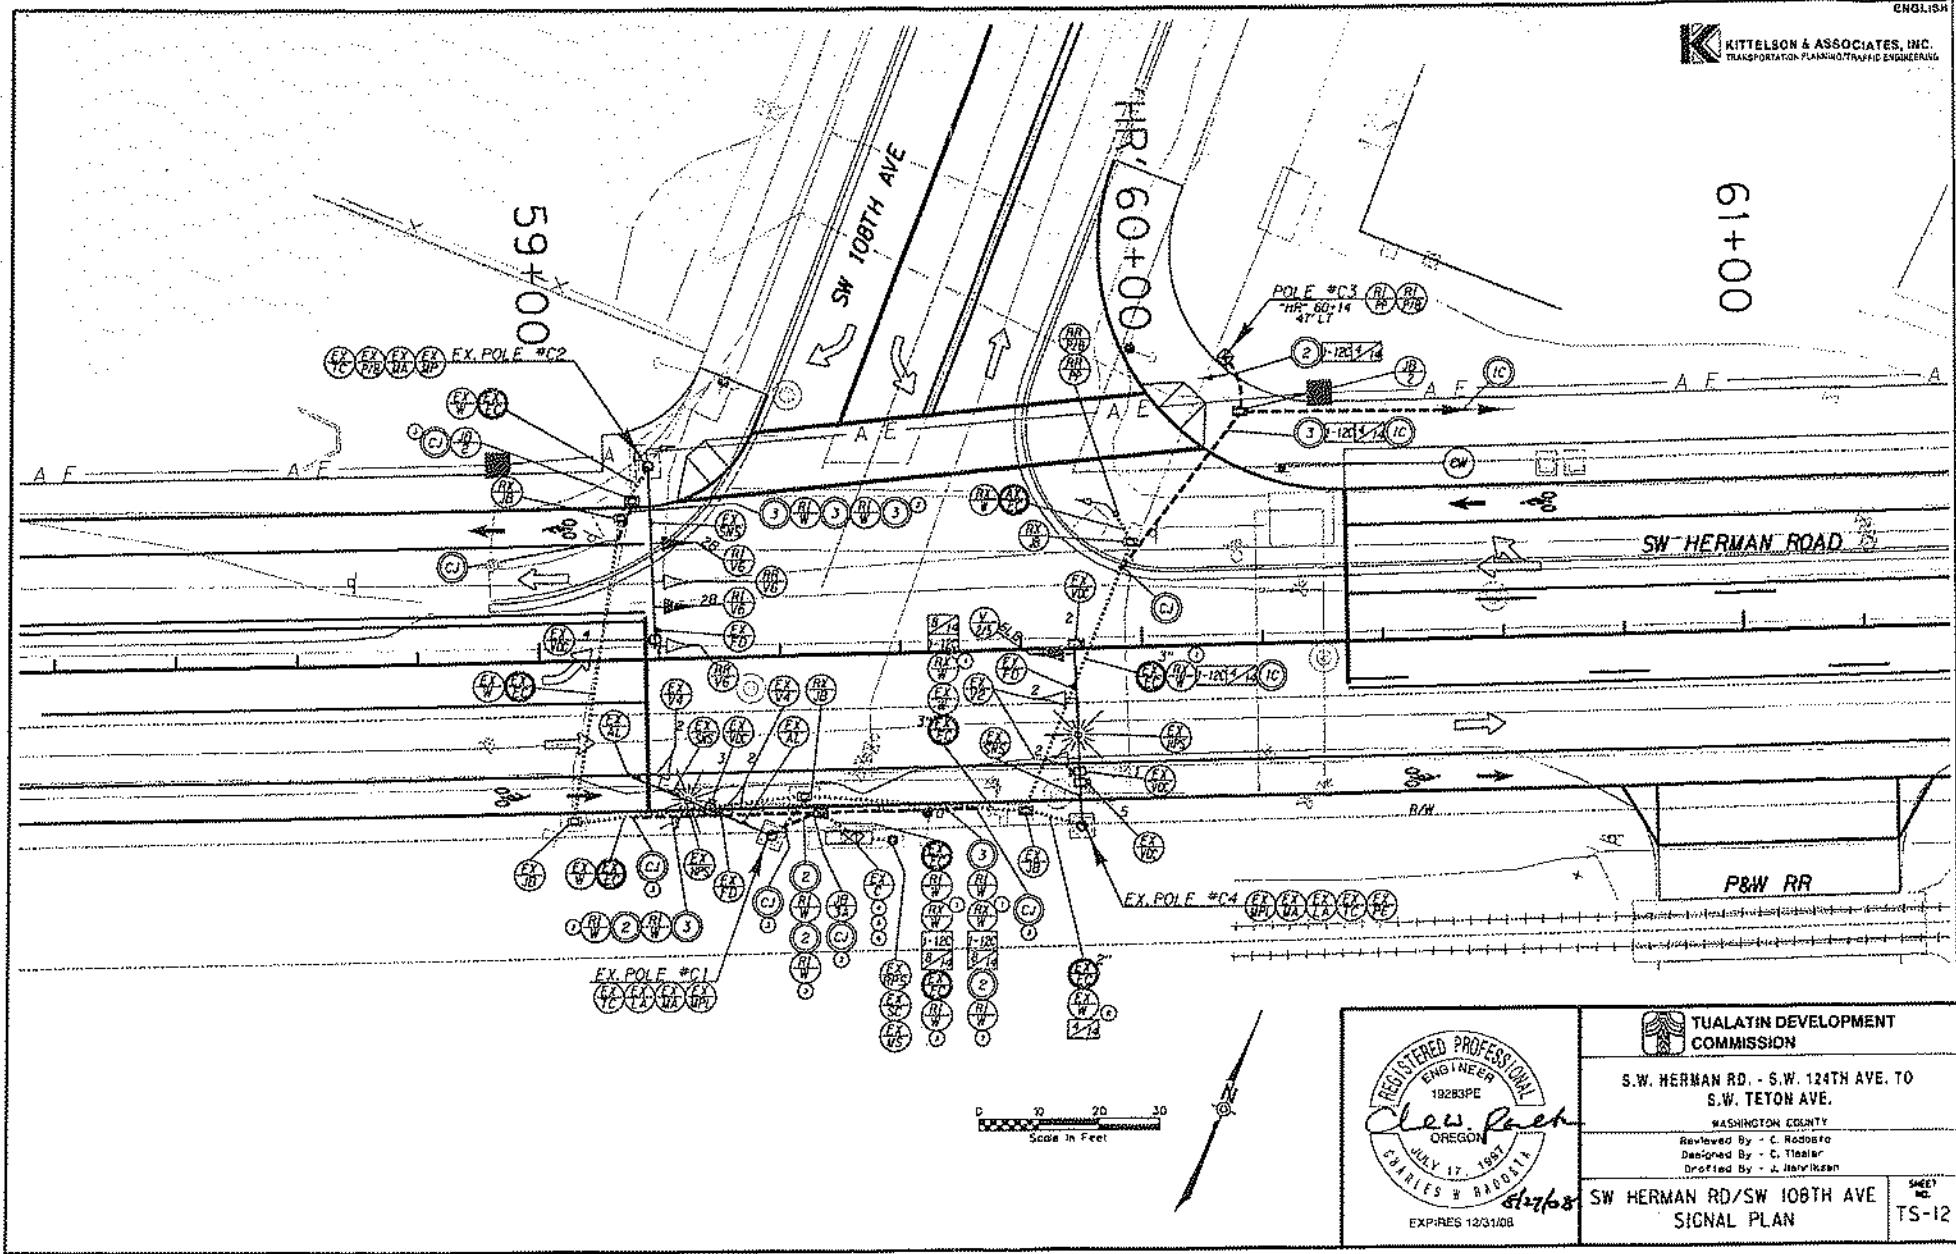

6L+

CONSTRUCTION NOTES:

- ① Remove existing wiring for existing pedestrian post. Retain all other existing wiring.
- ② Install 4-#14 wires to operate the Eastbound left-turn signal.
- ③ Intercept existing conduit and install junction box. Relocate existing wiring into new conduit as shown. Abandon existing unused conduit.
- ④ Replace existing controller unit with a new 2070L unit.
- ⑤ Terminate phase 5 flashing yellow Indication to phase 6 pedestrian yellow switchpack output. Terminate Conflict Monitor channel 11 (pin 51 wire to Output File terminal 120).
- ⑥ Re-establish telephone connection with local company after completion of utility pole relocation.

**Warrants Evaluated:**

Warrant 1, 8-Hour Vehicular Volume - Evaluated for Conditions A &amp; B

Warrant 2 , 4-Hour Vehicular Volume - Evaluated

Warrant 3, Peak Hour - Evaluated for Conditions A-2, A-3 (A-1 needs to be evaluated separately), and Condition B

Warrant 4, Pedestrian Volume - Not Analyzed

Warrant 5, School Crossing - Not Analyzed

Warrant 6, Coordinated Signal System - Not Analyzed

Warrant 7, Accident Experience - Not Analyzed

Warrant 8, Roadway Network - Not Analyzed

Warrant 9, Intersection Near a Grade Crossing - Not Analyzed

<b>WARRANT 3, PEAK HOUR VEHICULAR VOLUME</b>									
	MAJOR			MINOR		Calculated Threshold (B)	<u>A-2&amp;3</u>	<u>B</u>	
	NB	SB	Total	EB	WB				
4:00 PM	120	232	352	165	0	165	522	N	N
7:00 AM	237	79	316	171	0	171	551	N	N
12:00 AM	0	0	0	0	0	0	885	N	N
1:00 PM	0	0	0	0	0	0	885	N	N

**Warrant Requirements:**

Major Street Lanes: 1  
Minor Street Lanes: 1

**CONDITION A-1 - Stopped Delay**  
Cannot be evaluated based on volumes alone. Condition met if traffic on one minor-street approach (one direction only) controlled by STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach.

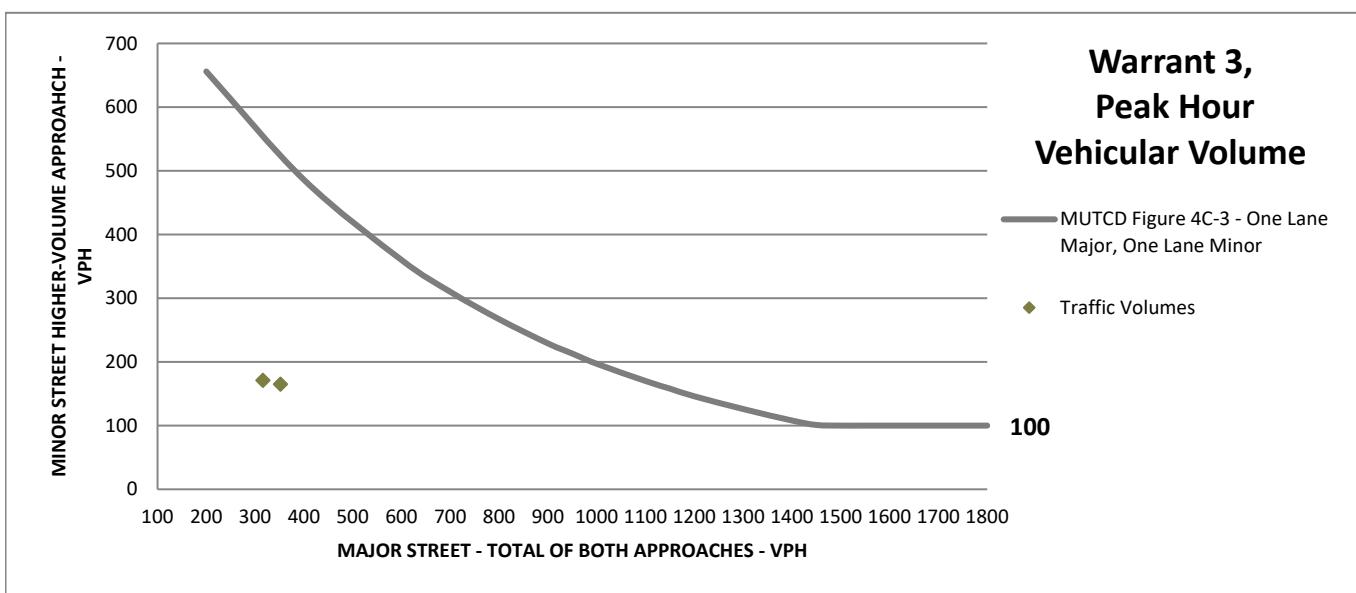

**CONDITION A-2 - Minor Street Volume**  
Minimum Volume on Higher Minor Street Approach: 100

**CONDITION A-3 - Total Approach Volume**  
Minimum Volume of Total Approaches: 650

**CONDITION B - Plot of Minor Street Volume (high vol approach) vs. Major Street Volume (Both approaches)**

**ARE CONDITIONS A-2 AND A-3 OF SIGNAL WARRANT 3 MET?** NO  
Note: All 3 subsections of Condition A must be met to warrant signal.

**IS CONDITION B OF SIGNAL WARRANT 3 MET?** NO  
Note: Signal Warrant 3 is met if either Condition A or Condition B is met.

## TRAFFIC SIGNAL WARRANTS - BASED ON 2009 MUTCD

8/12/2022

INTERSECTION INFORMATION						
City:	Tualatin	Condition:	2024 Post-Development			
Population:	27,000					
Intersection Location:	Urban					
(Rural/Urban)

6:00 PM	223	302	525	107	0	107	N	N

**Warrant Requirements:**

Major Street Lanes: 1  
 Minor Street Lanes: 2

**CONDITION A - Minimum Vehicular Volume**

Minimum Volume on Combined Major Street Approaches:	500
Minimum Volume on Higher Minor Street Approach:	200

**CONDITION B - Interruption of Continuous Traffic**

Minimum Volume on Combined Major Street Approaches:	750
Minimum Volume on Higher Minor Street Approach:	100

**IS CONDITION A OF SIGNAL WARRANT 1 MET?** NO

**IS CONDITION B OF SIGNAL WARRANT 1 MET?** NO

**IS COMBINED CONDITIONS A & B MET AT 80% LEVEL?** NO

Note: Signal Warrant 1 is met if either Condition A or Condition B is met.

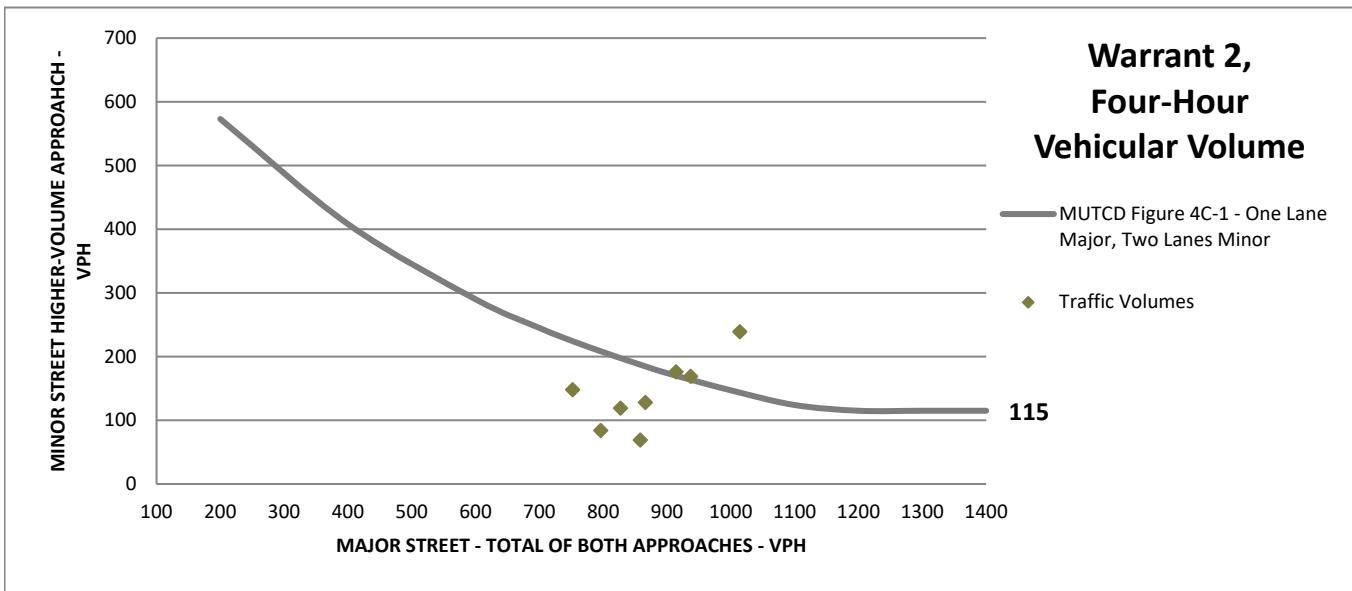

WARRANT 2, FOUR HOUR VEHICULAR VOLUME								
	MAJOR			MINOR		Calculated Threshold		
	EB	WB	Total	NB	SB	Max		
4:00 PM	406	608	1,014	239	0	239	144	Y
5:00 PM	361	576	937	169	0	169	164	Y
3:00 PM	420	494	914	176	0	176	170	Y
8:00 AM	538	328	866	128	0	128	185	N
12:00 PM	413	414	827	119	0	119	197	N
7:00 AM	576	282	858	69	0	69	187	N
2:00 PM	333	419	752	148	0	148	224	N
1:00 PM	400	396	796	84	0	84	208	N

**Warrant Requirements:**

Major Street Lanes: 1  
Minor Street Lanes: 2

IS SIGNAL WARRANT 2 MET? NO

WARRANT 3, PEAK HOUR VEHICULAR VOLUME									
	MAJOR			MINOR			Calculated Threshold (B)	A-2&3	B
	EB	WB	Total	NB	SB	Max			
4:00 PM	406	608	1,014	239	0	239	280	Y	N
5:00 PM	361	576	937	169	0	169	309	Y	N
3:00 PM	420	494	914	176	0	176	318	Y	N
8:00 AM	538	328	866	128	0	128	339	N	N

**Warrant Requirements:**

Major Street Lanes: 1  
Minor Street Lanes: 2

**CONDITION A-1 - Stopped Delay**  
Cannot be evaluated based on volumes alone. Condition met if traffic on one minor-street approach (one direction only) controlled by STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach.

**CONDITION A-2 - Minor Street Volume**  
Minimum Volume on Higher Minor Street Approach: 150

**CONDITION A-3 - Total Approach Volume**  
Minimum Volume of Total Approaches: 650

**CONDITION B - Plot of Minor Street Volume (high vol approach) vs. Major Street Volume (Both approaches)**

**ARE CONDITIONS A-2 AND A-3 OF SIGNAL WARRANT 3 MET?** YES      *Stopped Delay Needs to be Checked*  
Note: All 3 subsections of Condition A must be met to warrant signal.

**IS CONDITION B OF SIGNAL WARRANT 3 MET?** NO  
Note: Signal Warrant 3 is met if either Condition A or Condition B is met.
